- 16 WQ/WQF Standard model

## COMPANY PROFILE

### About Us

The company is product-oriented and has established long-term industry-university-research cooperation relationships with national key scientific research institutes. It has a provincial R&D platform, and has dozens of intellectual property rights such as invention patents, utility model patents, and copyrights. Many products such as floating pump station have been rated as provincial high-tech products and provincial new product and new technology appraisal. Editor-in-chief of "Selection and Installation of Prefabricated Tank Pump Integrated Fire Water Supply Pump Station - MX Smart Pump Station" 18CS01, "Technical Regulations of Prefabricated Tank Pump Integrated Fire Water Supply Pump Station" CECS623-2019, and participated in the compilation of "Inverter Frequency Modulation" Selection and Installation of Quick Water Supply Equipment" 16S111, "Technical Regulations for the Application of Sewage Lifting Devices" CECS463-2017, "Practical Guidelines for Water Disposal Regulations" and other atlases, standards and technical documents.

Since its establishment in 2006, the company has unwaveringly adhered to product innovation, and has a broad customer base in government departments, hospitals, education and other fields.

The company has passed the three major certifications of ISO9001 quality management system, ISO14000 environmental management system and OHSAS occupational health and safety system. Fire protection products have passed 3C compulsory certification, established a perfect quality assurance system, and was rated as "AAA-level" credit unit in Jiangsu Province.

As a standard-setting enterprise for intelligent fire protection integrated pumping station, the company has an independent and mature software and hardware development team, independent research and development and production capacity is quite large, which has laid a solid foundation and strong guarantee for the intelligent fire protection industry.

The company's latest "smart fire protection" system, based on the design concept of smart city construction, applies a new generation of information technologies such as the Internet of Things, big data, cloud computing, mobile Internet, etc., which can fully realize the efficient operation of the fire alarm system and effectively improve the entire fire protection system. The efficiency of linkage and cooperation of the system truly achieves the perfect embodiment of prevention first and the combination of prevention and fire protection advocated by fire protection.

## 一、Product overview

The newly launched submersible sewage pump is developed by screening and improving similar WQ series products at home and abroad to overcome their shortcomings. Rational optimization and innovative design are carried out in hydraulic model, sealing technology, mechanical structure, protection and control, etc., making it more reliable, safe, lightweight and practical, long life and good sewage performance; The whole series of products, the type spectrum is reasonable, easy to select. It is equipped with special electric control cabinet for submersible pump to realize its protection and automatic control.

Model screening: Performance optimization, two-channel impeller, reasonable arrangement of two to three mechanical seals, so that the mechanical seal lubrication, cooling more ideal, smooth operation without plugging, good flow capacity.

Seal improvement: With series mechanical seals, shaft seals are more reliable and have longer service life.

Structural optimization: The structural design is conducive to the sealing of the machine seal, smooth operation, vibration resistance, drop resistance, higher reliability; Optimized design, sewage pump more portable and practical, more corrosion resistance, wear resistance.

IPX8 motor protection grade, submersible motor cooling effect is good, the temperature rise is lower than the ordinary motor, the durability is further improved, F class insulation to promote the motor longer service life.

The motor is equipped with a variety of protection devices, which can facilitate the user to optimize the selection

## 二、Main applications

Suitable for building buildings, hospitals, residential areas, municipal engineering, road traffic and its construction, engineering sewage, small sewage treatment and other occasions to discharge wastewater containing solid particles, long fibers, rainwater, sewage.

## 三、Conditions of use

- 1、Power supply 380V, three-phase, 50Hz.
- 2、the medium temperature generally does not exceed 40°C, PH value 4~10, medium weight ≤1100kg/m³.
- 3、The lowest liquid level complies with the lowest liquid level mark H1 in the installation dimension drawing.
- 4、can not adapt to strong corrosive fluid and strong abrasive solid particles of the medium.
- 5、the diameter of the solid object in the medium is not greater than the maximum solid diameter allowed through.
- 6、altitude ≤2000 meters;
- 7、the environment has no explosive danger of the medium, no enough to corrode metal and destroy the insulation of the damp gas and dust, the average maximum monthly humidity ≤90% (25°C)
- 8、vertical installation inclination ≤5° .

## 四、Structure specifications

### 1、Impeller of pump body

Carefully selected and matched pump body and impeller, so that the flow channel through the performance is good, high efficiency, flat power curve, not easy to overload. The impeller has precise balance, small vibration and smooth rotation.

### 2、Motor

Specially designed submersible motor, IPX8 protection, F class insulation allows high temperature rise, under normal temperature rise conditions, the motor insulation life is extended, and the submersible cooling effect is good, the actual temperature rise is low, the motor insulation life is longer.

### 3、Motor Cooling

The heat of the motor is dissipated through the housing, and the medium can operate reliably and safely as long as it penetrates half of the stator housing of the motor, the more it penetrates, the more favorable the motor cooling.

### 4、Shaft seal

The motor shaft seal adopts two to three series of mechanical seals to form a multi-channel reliable sealing line. One is in the medium in the pump, the sealing surface is pressed more tightly with the increase of the pressure of the medium, effectively preventing water from entering the oil chamber, and the other two are in the oil chamber to prevent oil from entering the motor, if the first one fails, the other two can still prevent oil and water from entering the motor. The bellows type seal and the innovative structural cavity further improve the reliability of the shaft seal, and the trouble-free running time exceeds 9000h under normal use.

### 5、Oil chamber

The oil chamber is filled with suitable mechanical oil and installed with two mechanical seals. The oil chamber is a barrier to prevent the medium from entering the motor from the pump shaft and prevent the medium from penetrating into the motor. If the first seal leaks, the buffer medium from the oil chamber cannot directly enter the motor. At the same time, the two independent sealing friction surfaces are lubricated and cooled to make the sealing work more reliable. In addition, it can also take away the heat of the lower bearing and some heat of the motor.

### 6、Bearing

The lower bearing constitutes the reliable support of the motor pump shaft. The lower bearing can be composed of two or three different bearing types according to the radial and axial forces and pulsating loads generated during the operation of the sewage pump. Ensure smooth operation and long service life of the unit.

### 7、Cable and seal

- 1 ) The cable is a flexible cable and cable core section designed for long-term reliable operation according to the ambient temperature of 40 ° C and the full load power of the motor. If the sewage pump is working, the motor will have a longer service life under the non-full load power or under the environment of 40 ° C.
- 2 ) There is a seal between the rubber sleeve of the cable edge and the motor pressure to prevent the medium from penetrating into the motor cavity between the cable and the motor cover interface.
- 3 ) There is rubber vulcanization between the cable sleeve and the core, once the rubber jacket is scratched, it can still effectively prevent the medium from entering the motor from the cable sheath.

### 8、Motor shell

The frame, bearing seat, cover, etc. constitute the motor shell, and the parts are connected with a reliable static seal, each of which is checked by strict hydraulic test to ensure its water tightness.

### 9、Safety protection in the pump (functions through a special electric control cabinet)

- 1 ) Oil and water probe: installed in the oil chamber to detect the leakage of the first seal (in the medium), when the leaking medium reaches the oil chamber, an alarm signal is generated.
- 2 ) Water inlet probe: installed in the motor cavity to detect the leakage of the second machine seal. When the oil (oil-water mixture) enters the motor, the water inlet probe will send an alarm signal and stop the pump.
- 3 ) Thermal element: installed in the motor stator winding, if the electric length is overloaded, the motor winding temperature (or other reasons for motor winding heat) reaches a certain value, send an alarm signal and stop the pump.

### 10、External control system

The special electric control cabinet can process all kinds of signals in the pump, and realize the functions of control, protection, sound and light alarm and a variety of automatic control of single pump and multi-pump. When the user brings his own electric control cabinet, he should contact the electric control cabinet group of our company to guide the user to install the protection controller in the electric control cabinet.

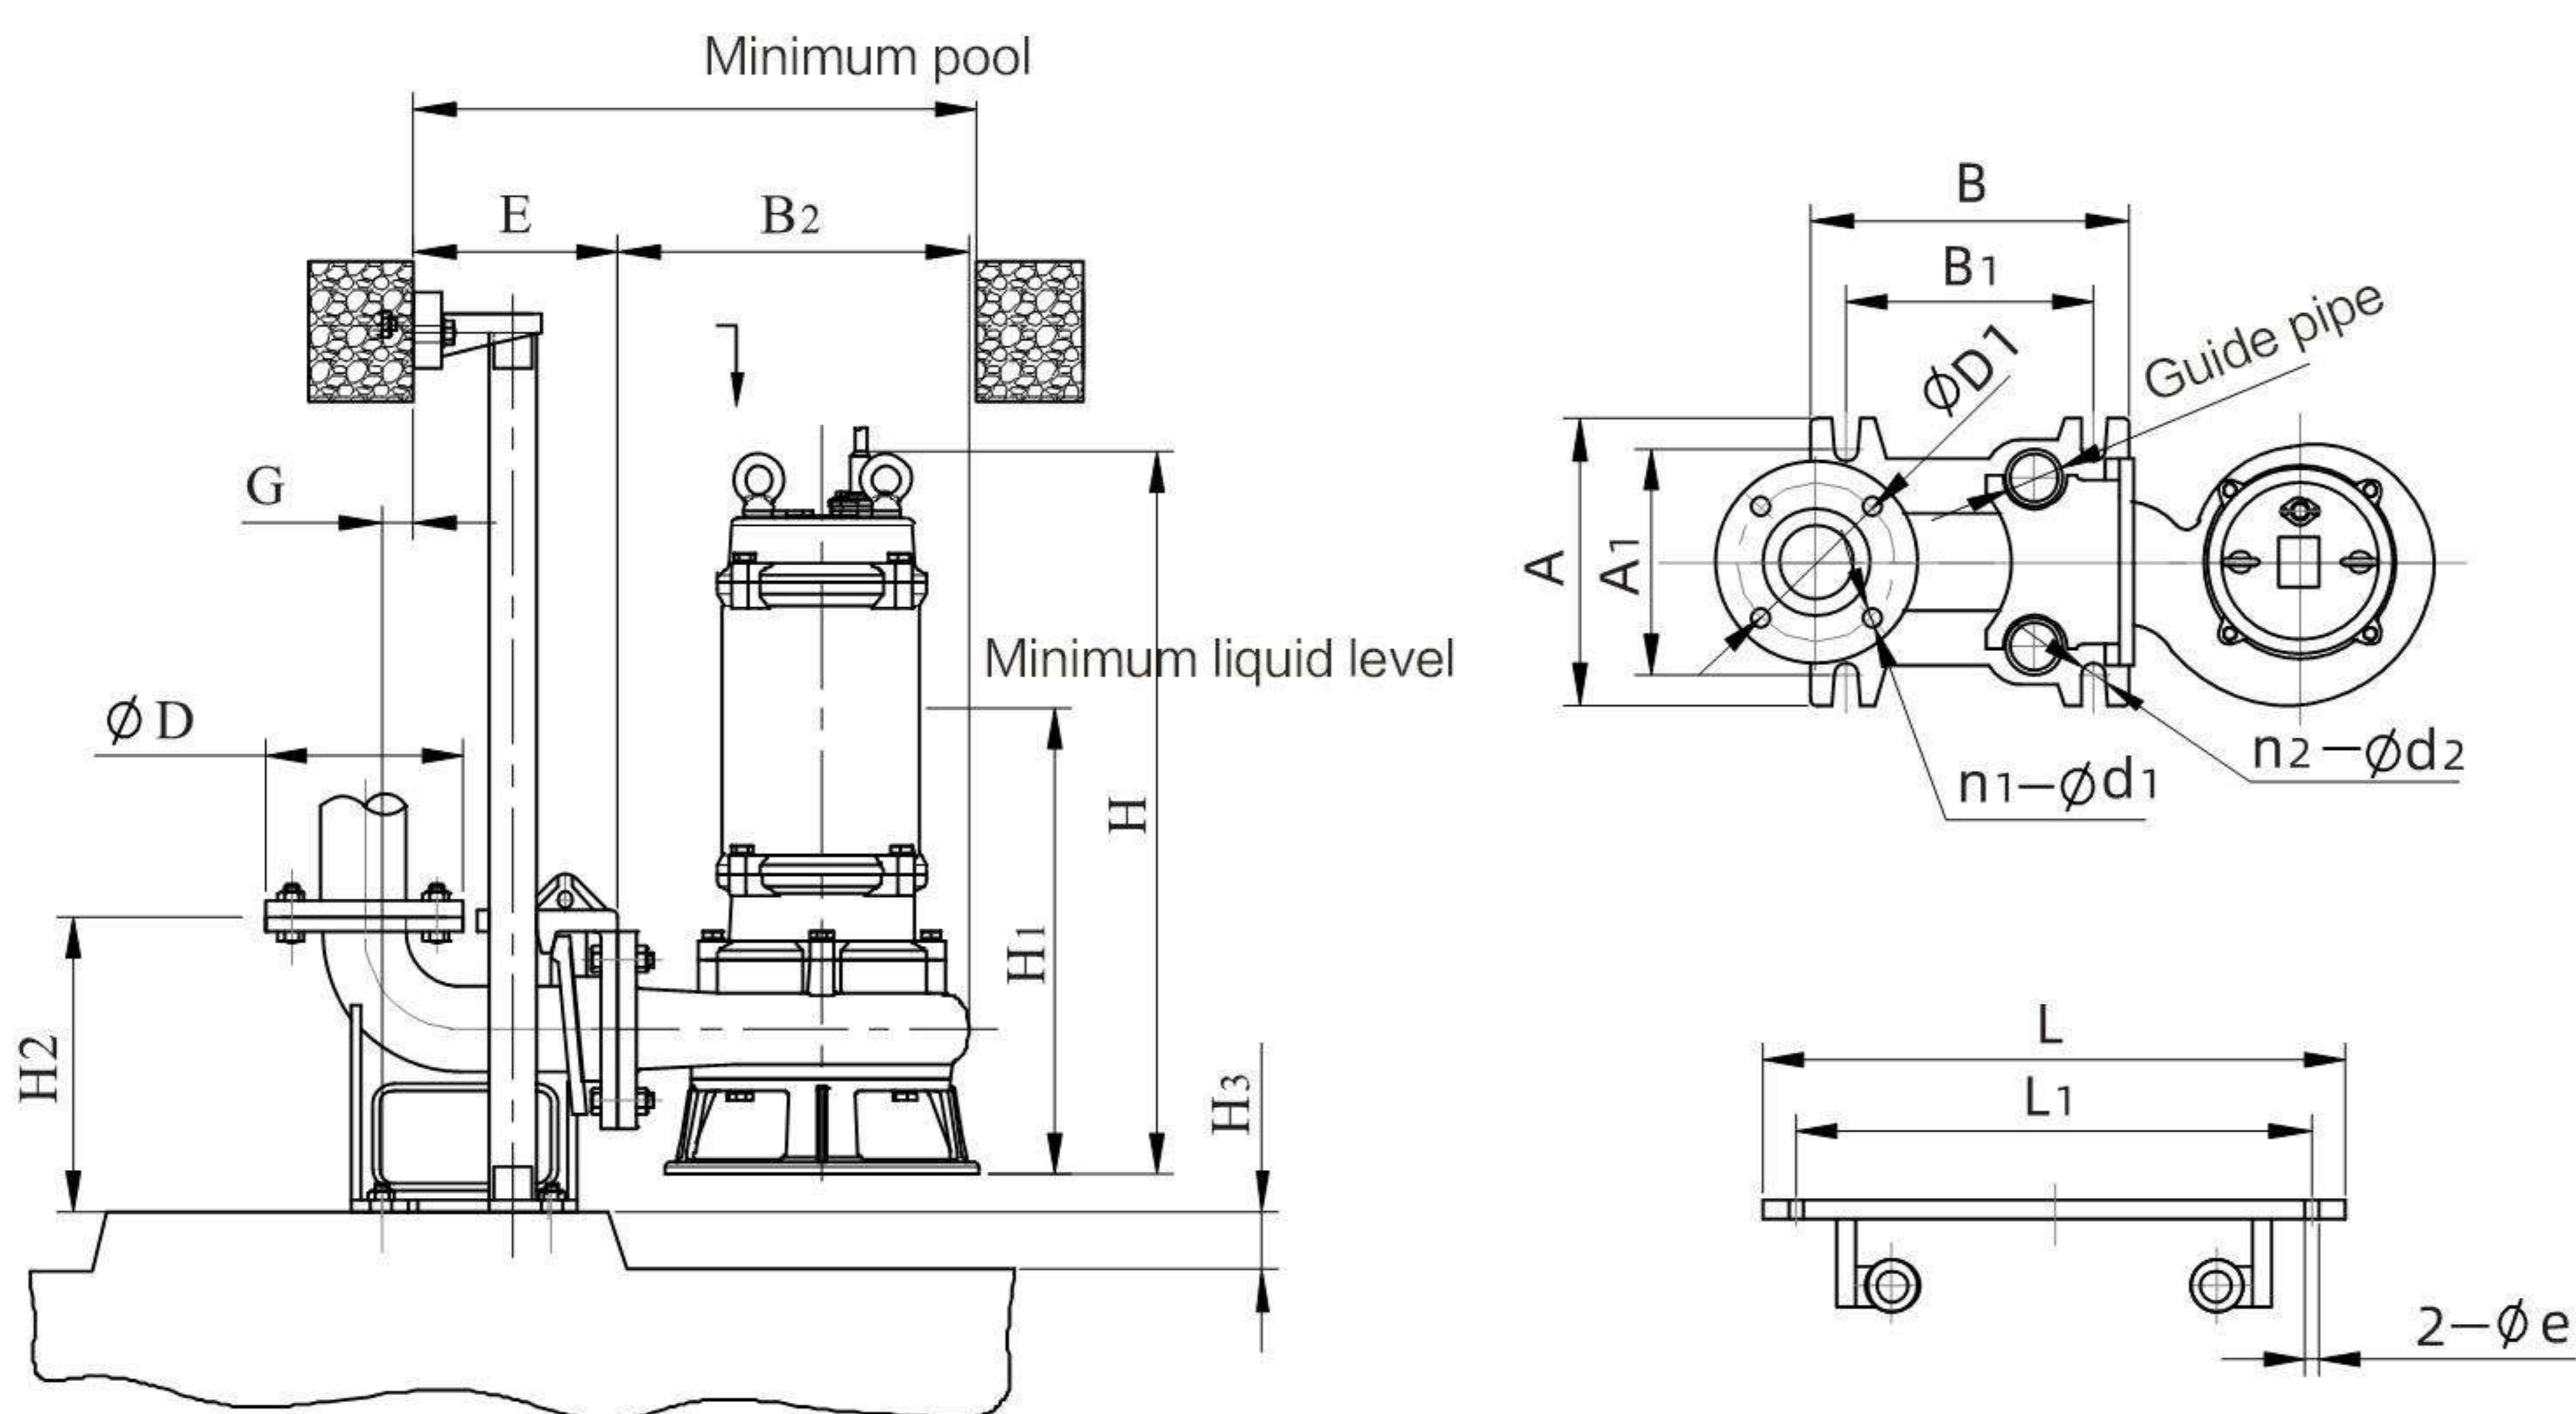

### 11、Performance curve and main parameters

The curve on the performance curve shows the recommended range of use of the pump. When the flow medium of the pump changes, it must be noted that the shaft power is within the rated power range of the motor when used, and when it is found that the overload is used, the submersible motor will burn out.

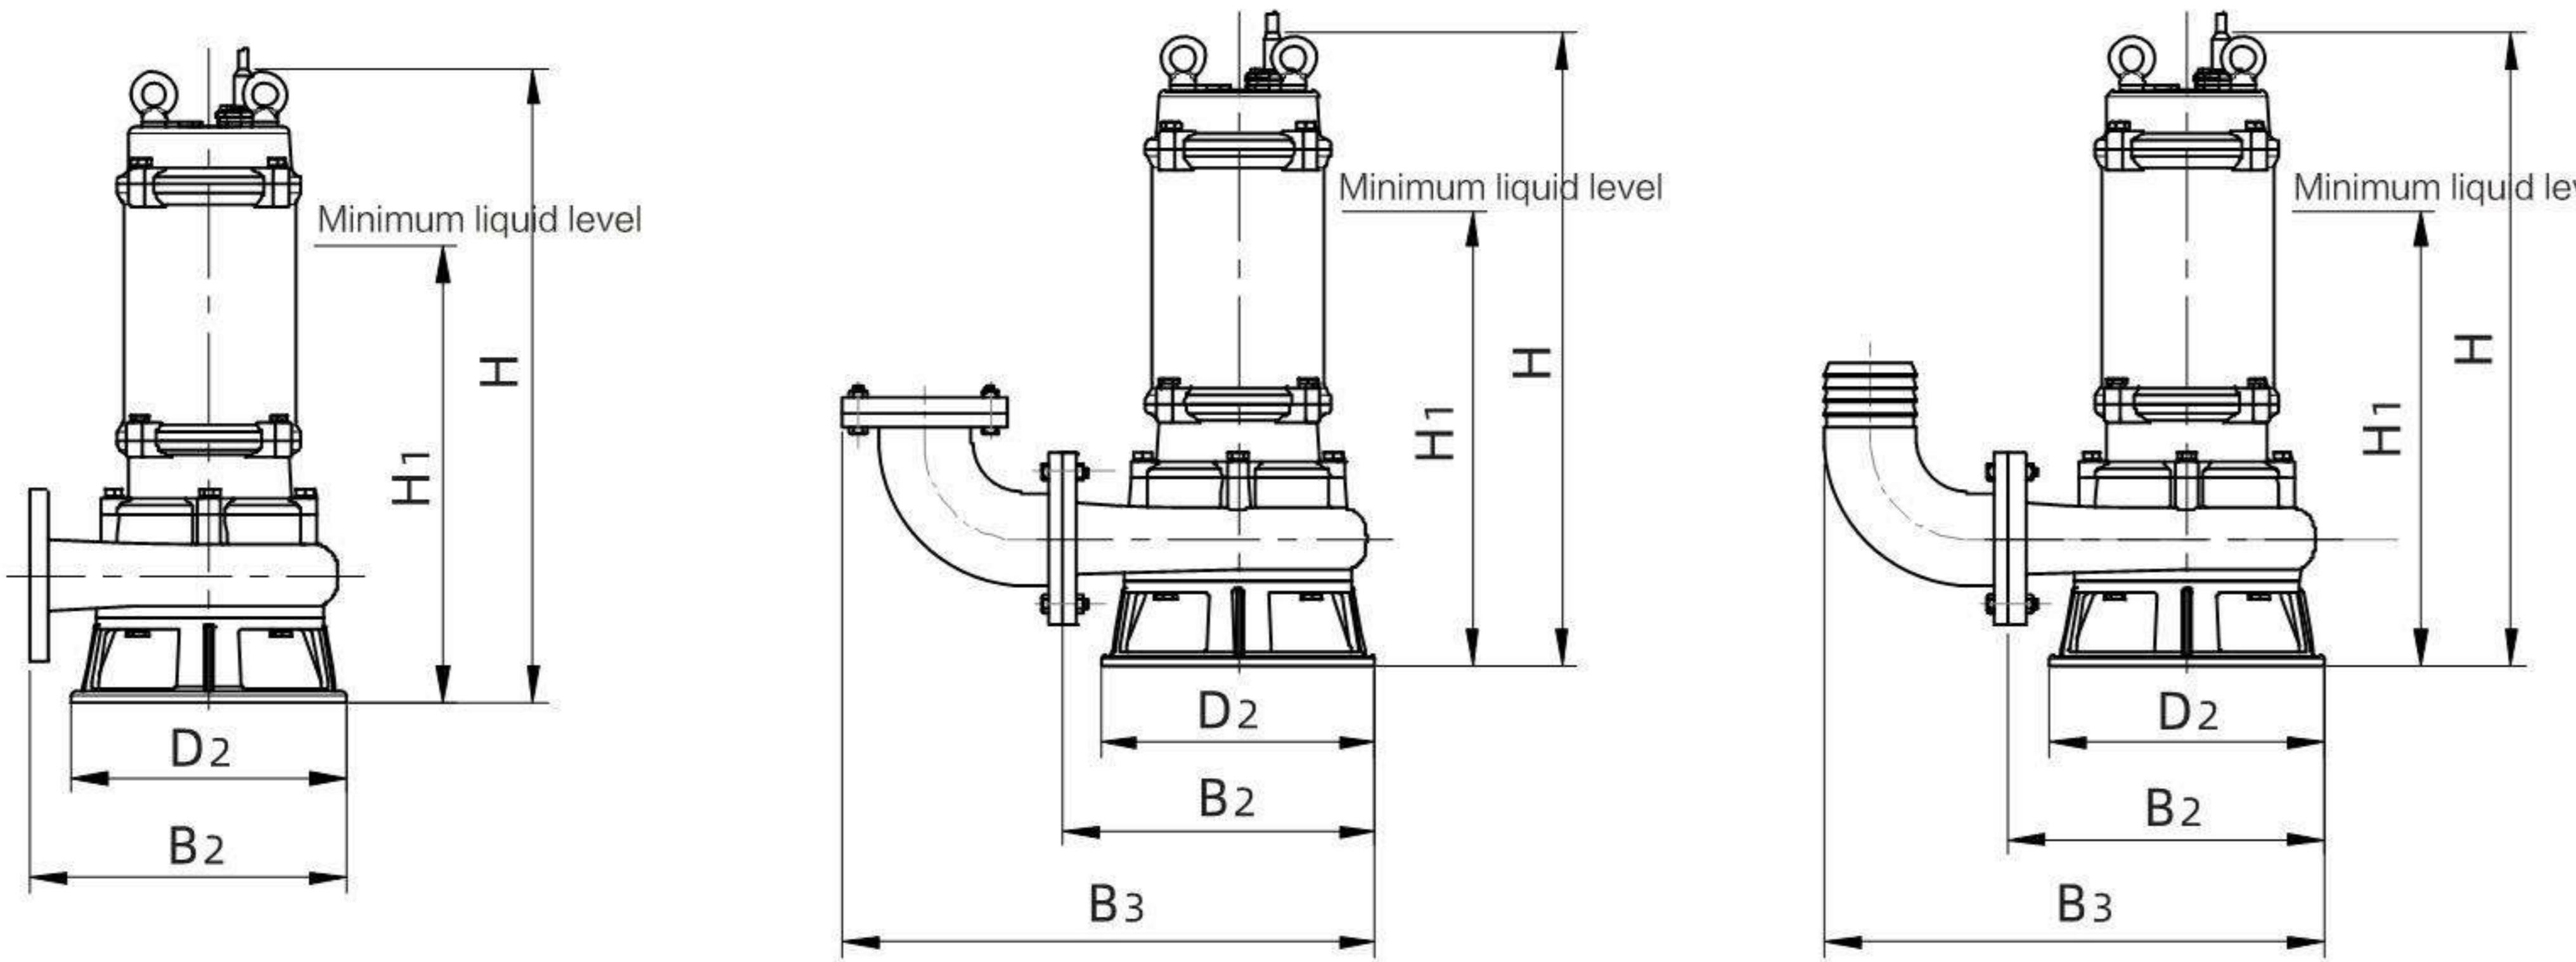

## 五、Installation mode

WQ series small submersible sewage pump has automatic coupling installation (Z), hard tube movable installation (Y), flexible tube movable e installation (R). Either way, it's easy to install.

WQ type fixed automatic coupling mounting dimensions

WQ mobile installation dimensions

A、Rigid pipe movable installation B、hard pipe (with double head flange bend pipe) movable installation

C、flexible hose movable installation

## 六、WQW, WQWF, WQ, JYWQ series submersible sewage pump coupling installation dimensions

## 八、WQW/ WQWF non-clogging cutting sewage pump

### 1、Appearance pictures (Premium type)

WQW Type

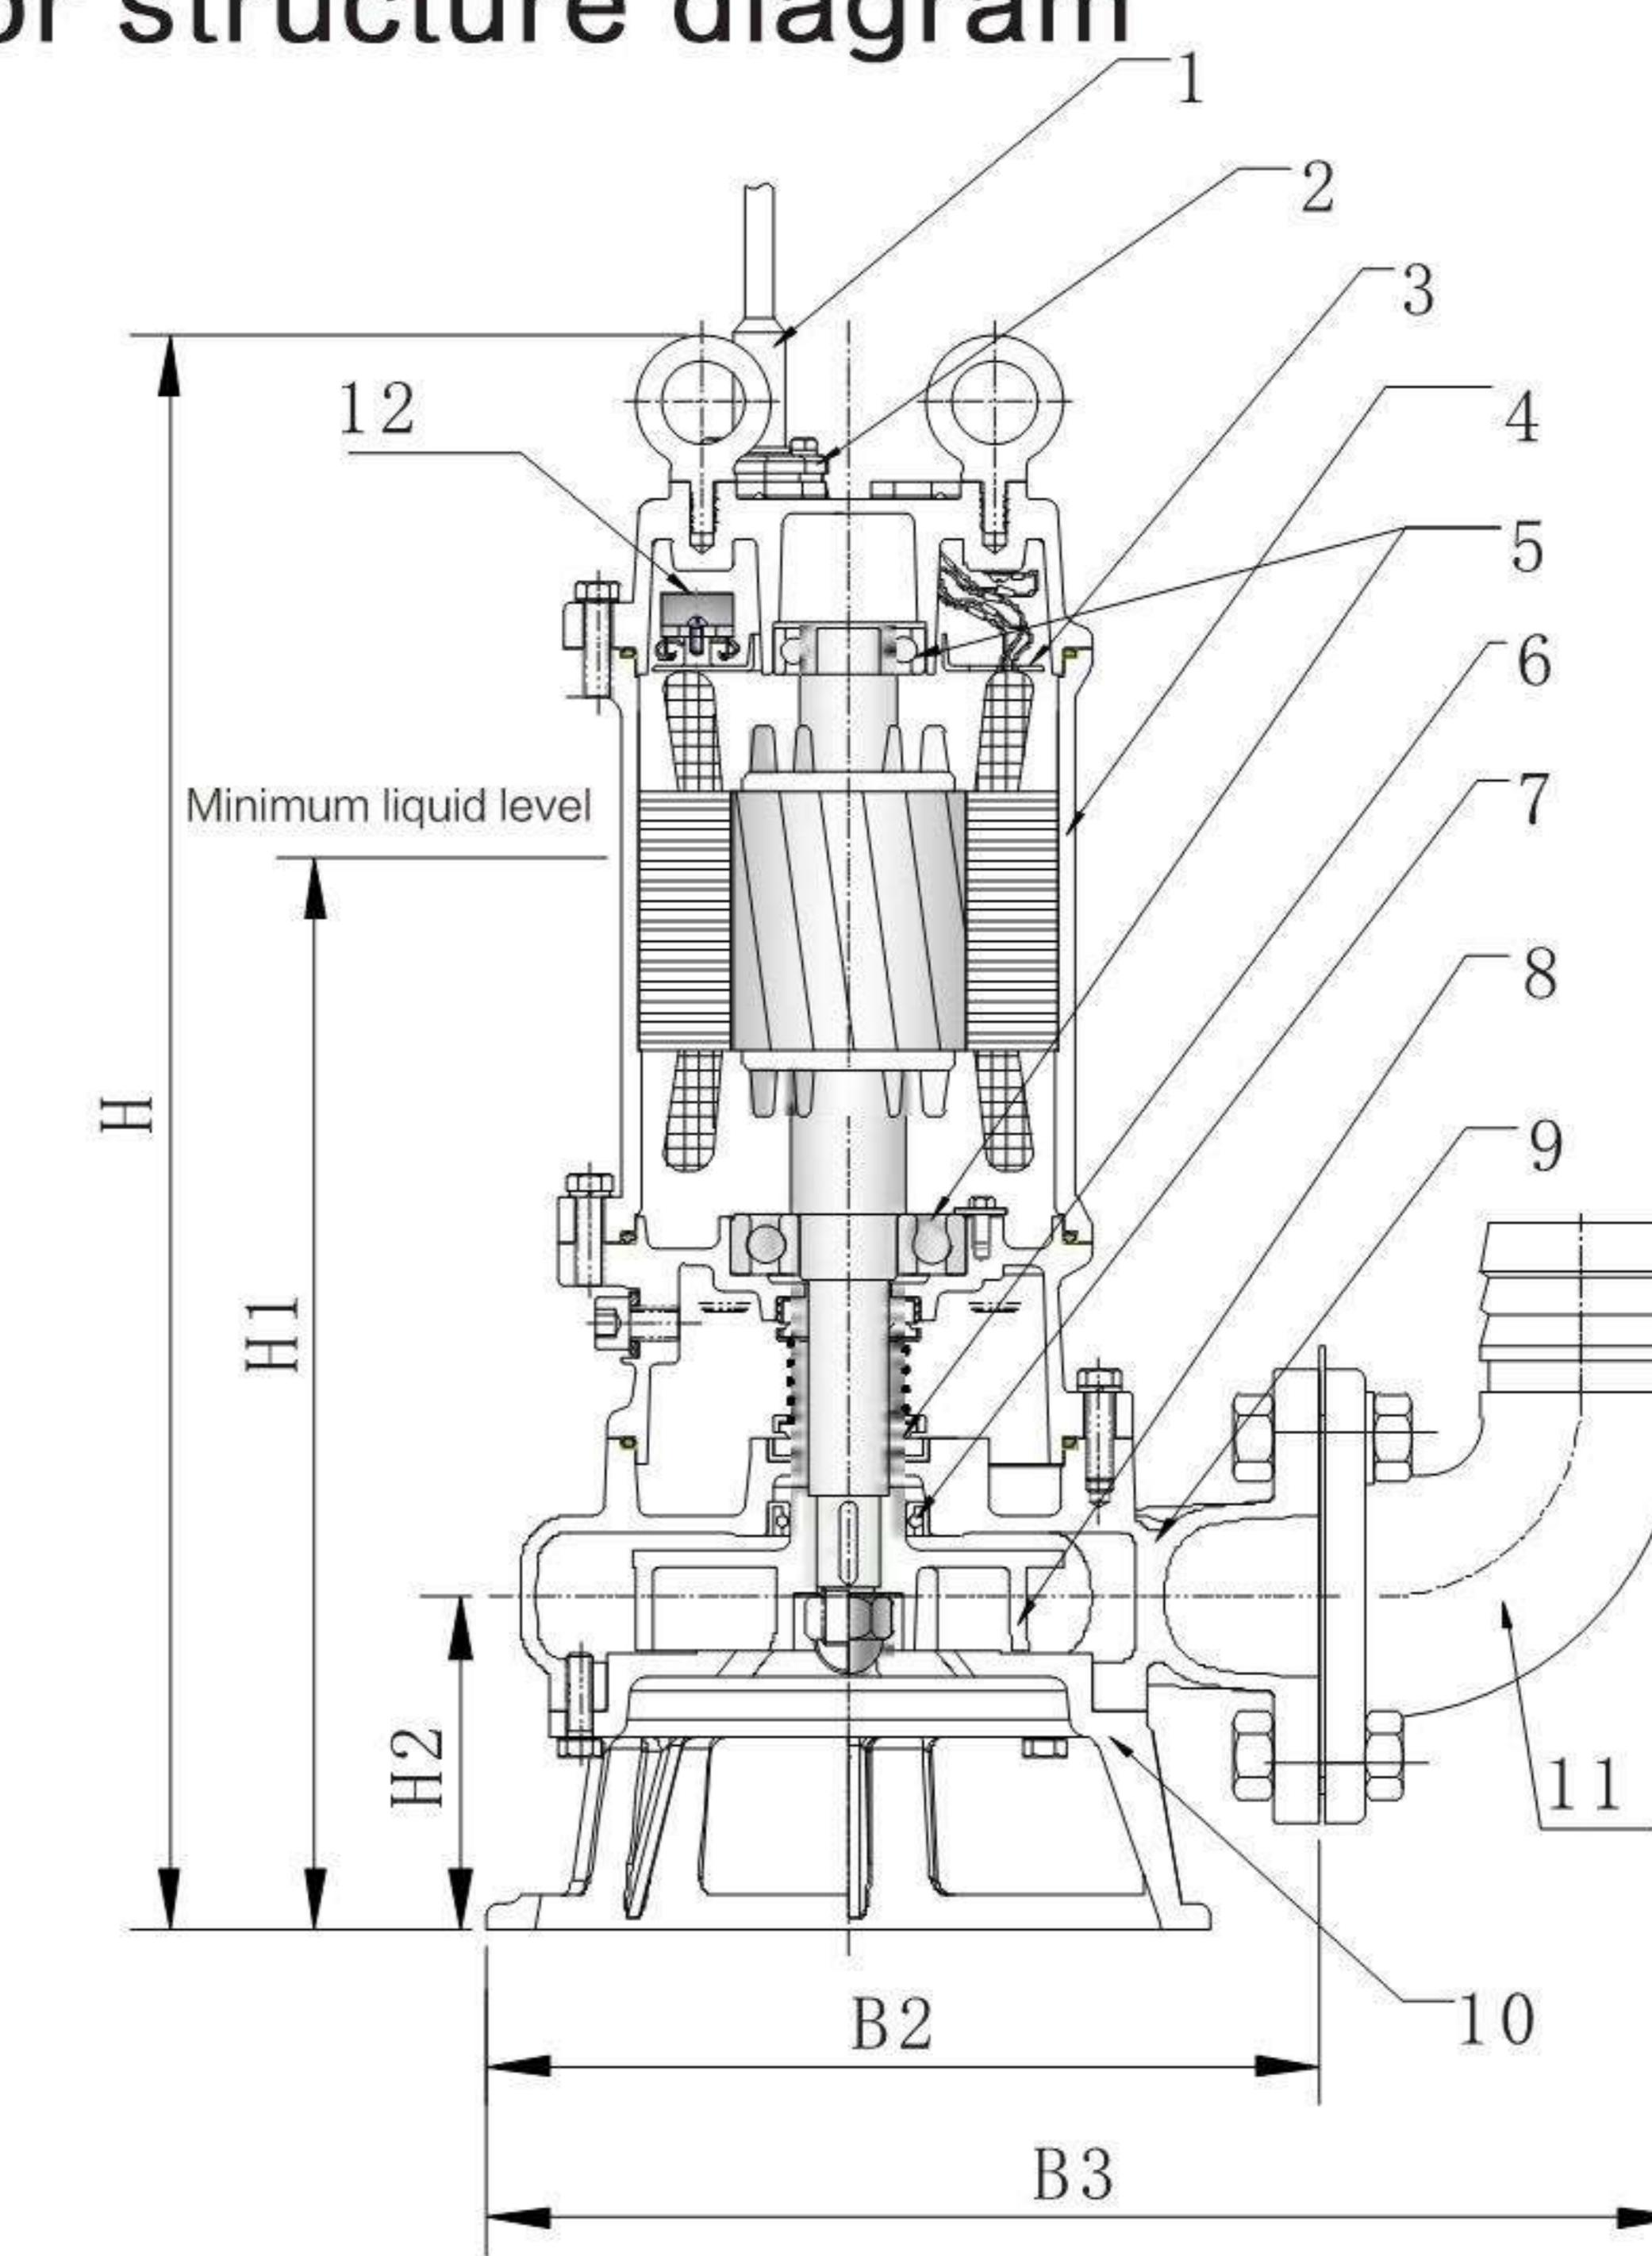

WQWF Type

The pump has the most reasonable cutting structure in the world, which perfectly avoids the blockage of the pump. The pump has a limiting ring to prevent the entanglement of foreign bodies and a rotating impeller with a cutting edge, which is combined with a water inlet base with a fixed knife ring to form a powerful cutting function. When the impeller rotates, the edge of the blade moves in reverse with the water inlet of the knife ring, which has an efficient cutting function. The impeller and water inlet base are made of casting processing, which can improve the flow, head and efficiency of the cutting pump.

### 2、Pump definition

80	WQ	W	F	65	-	15	-	5.5

## 十七、Performance curve

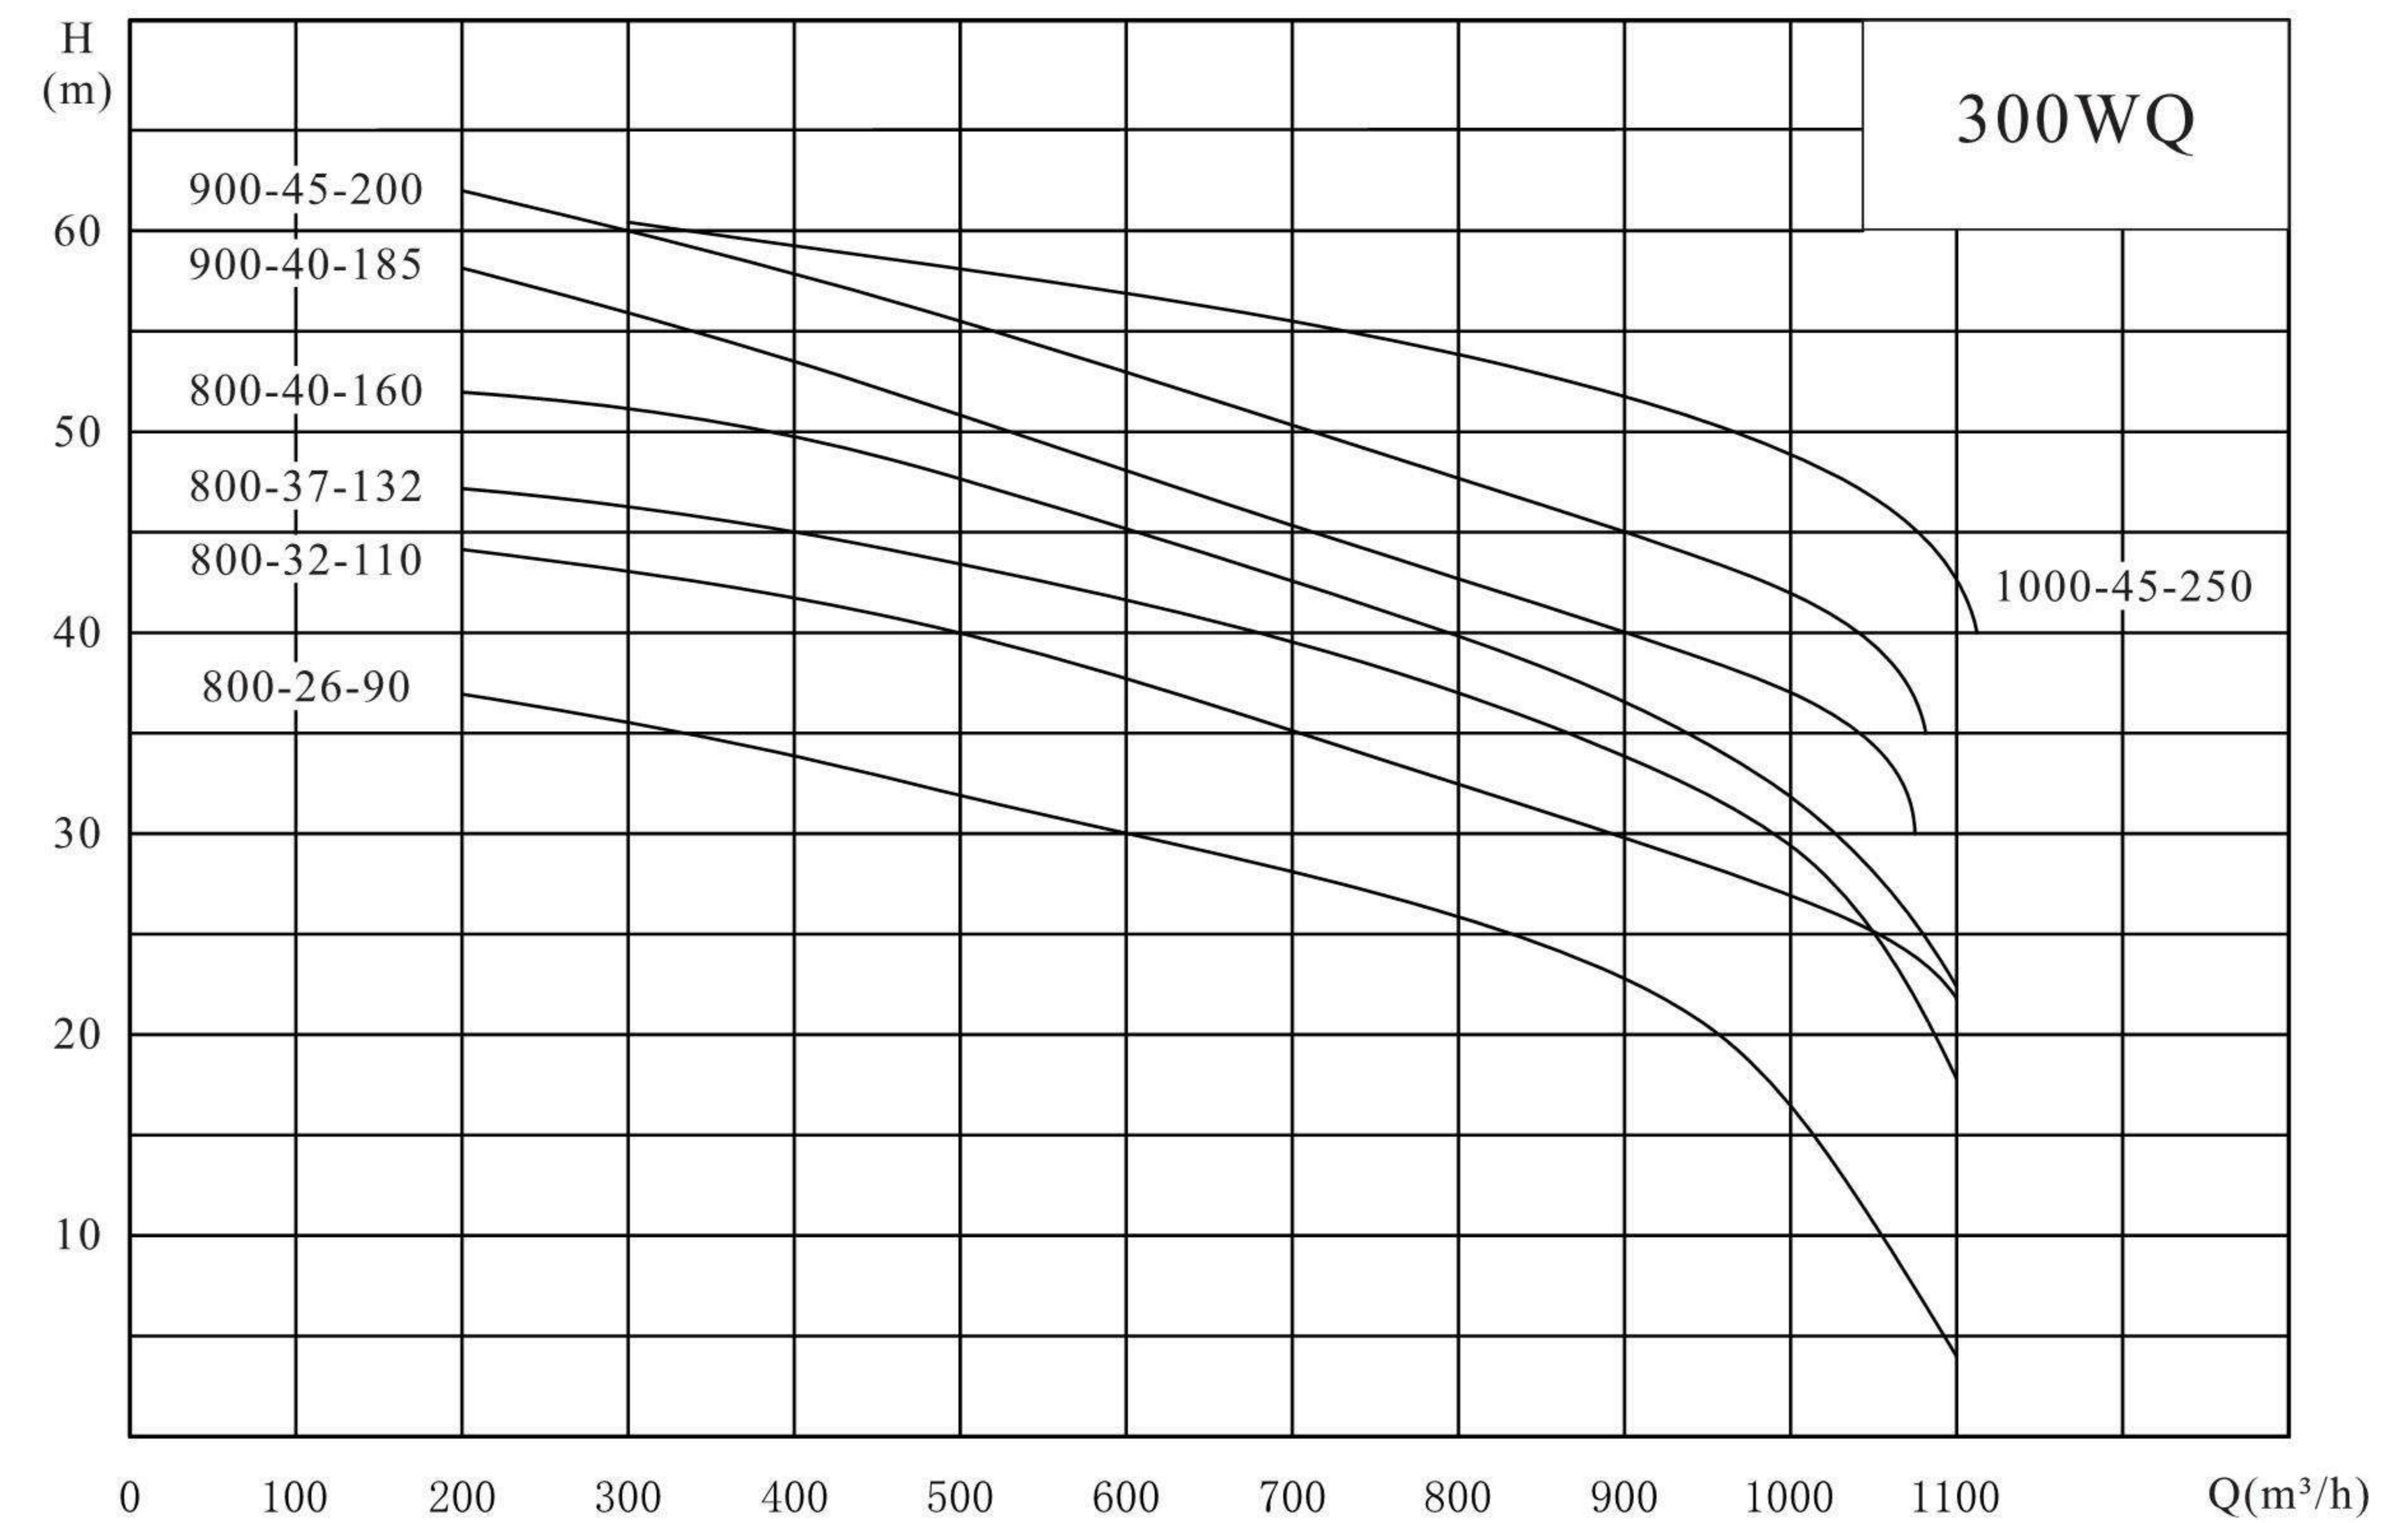

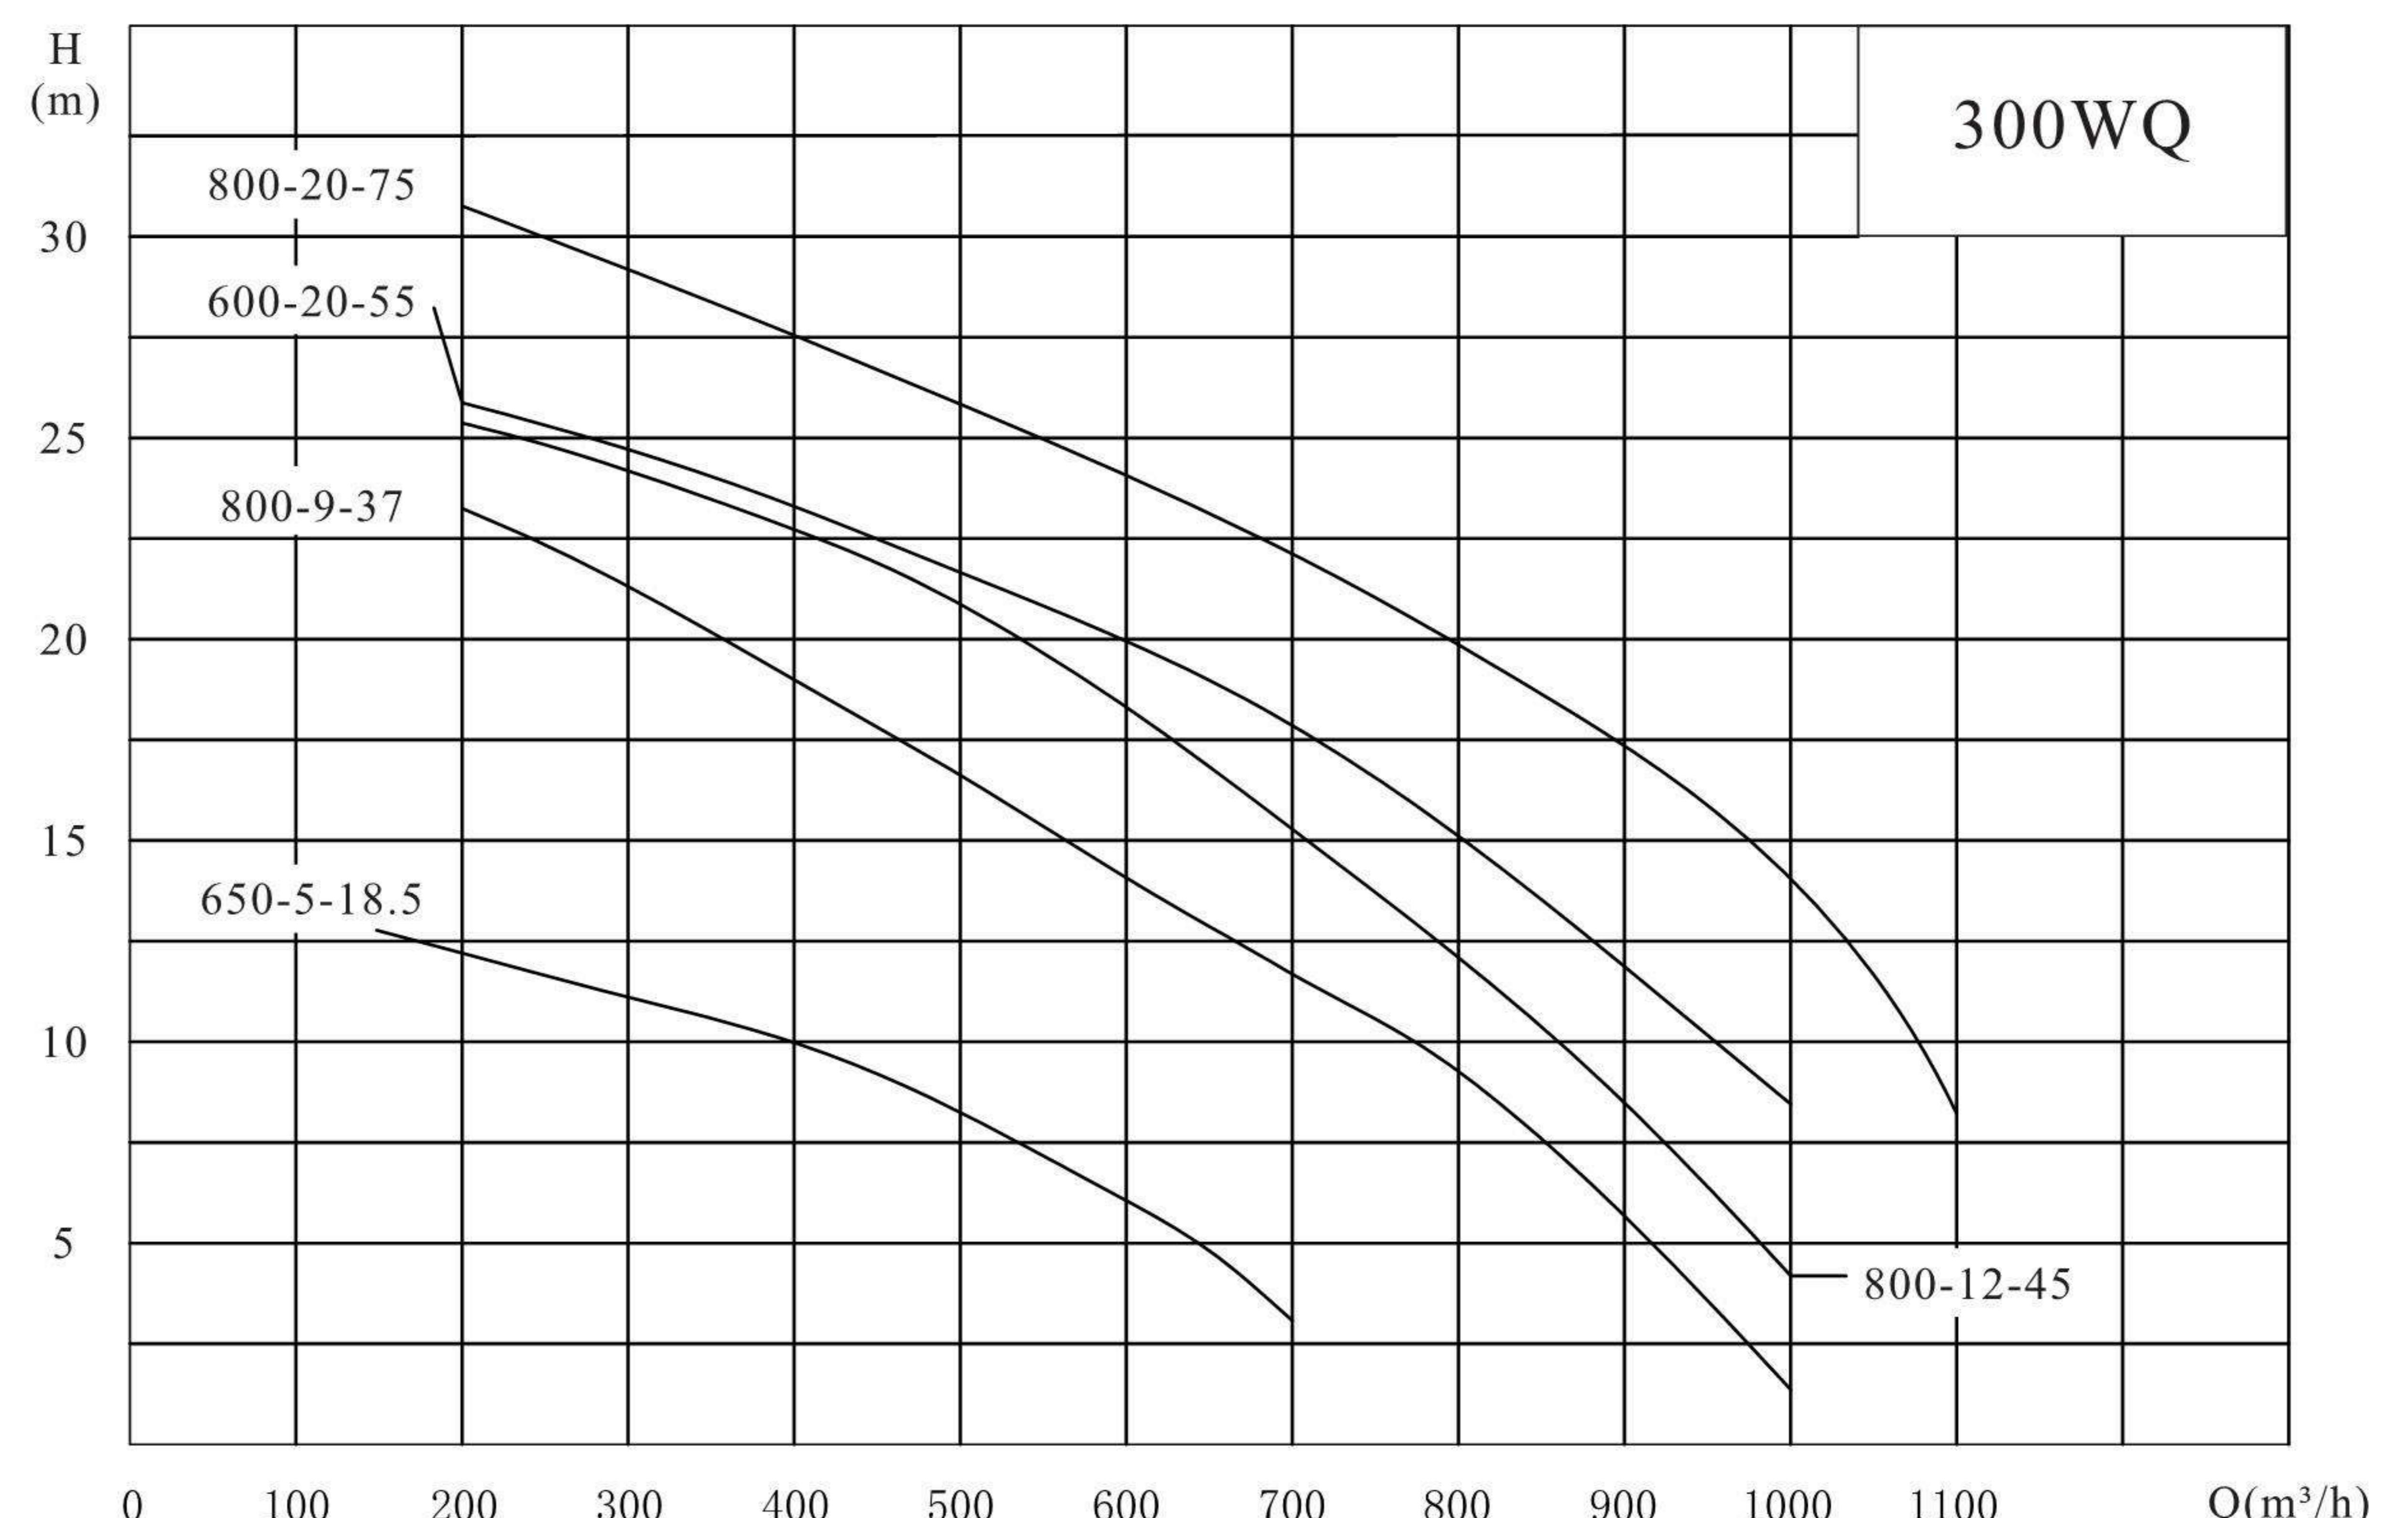

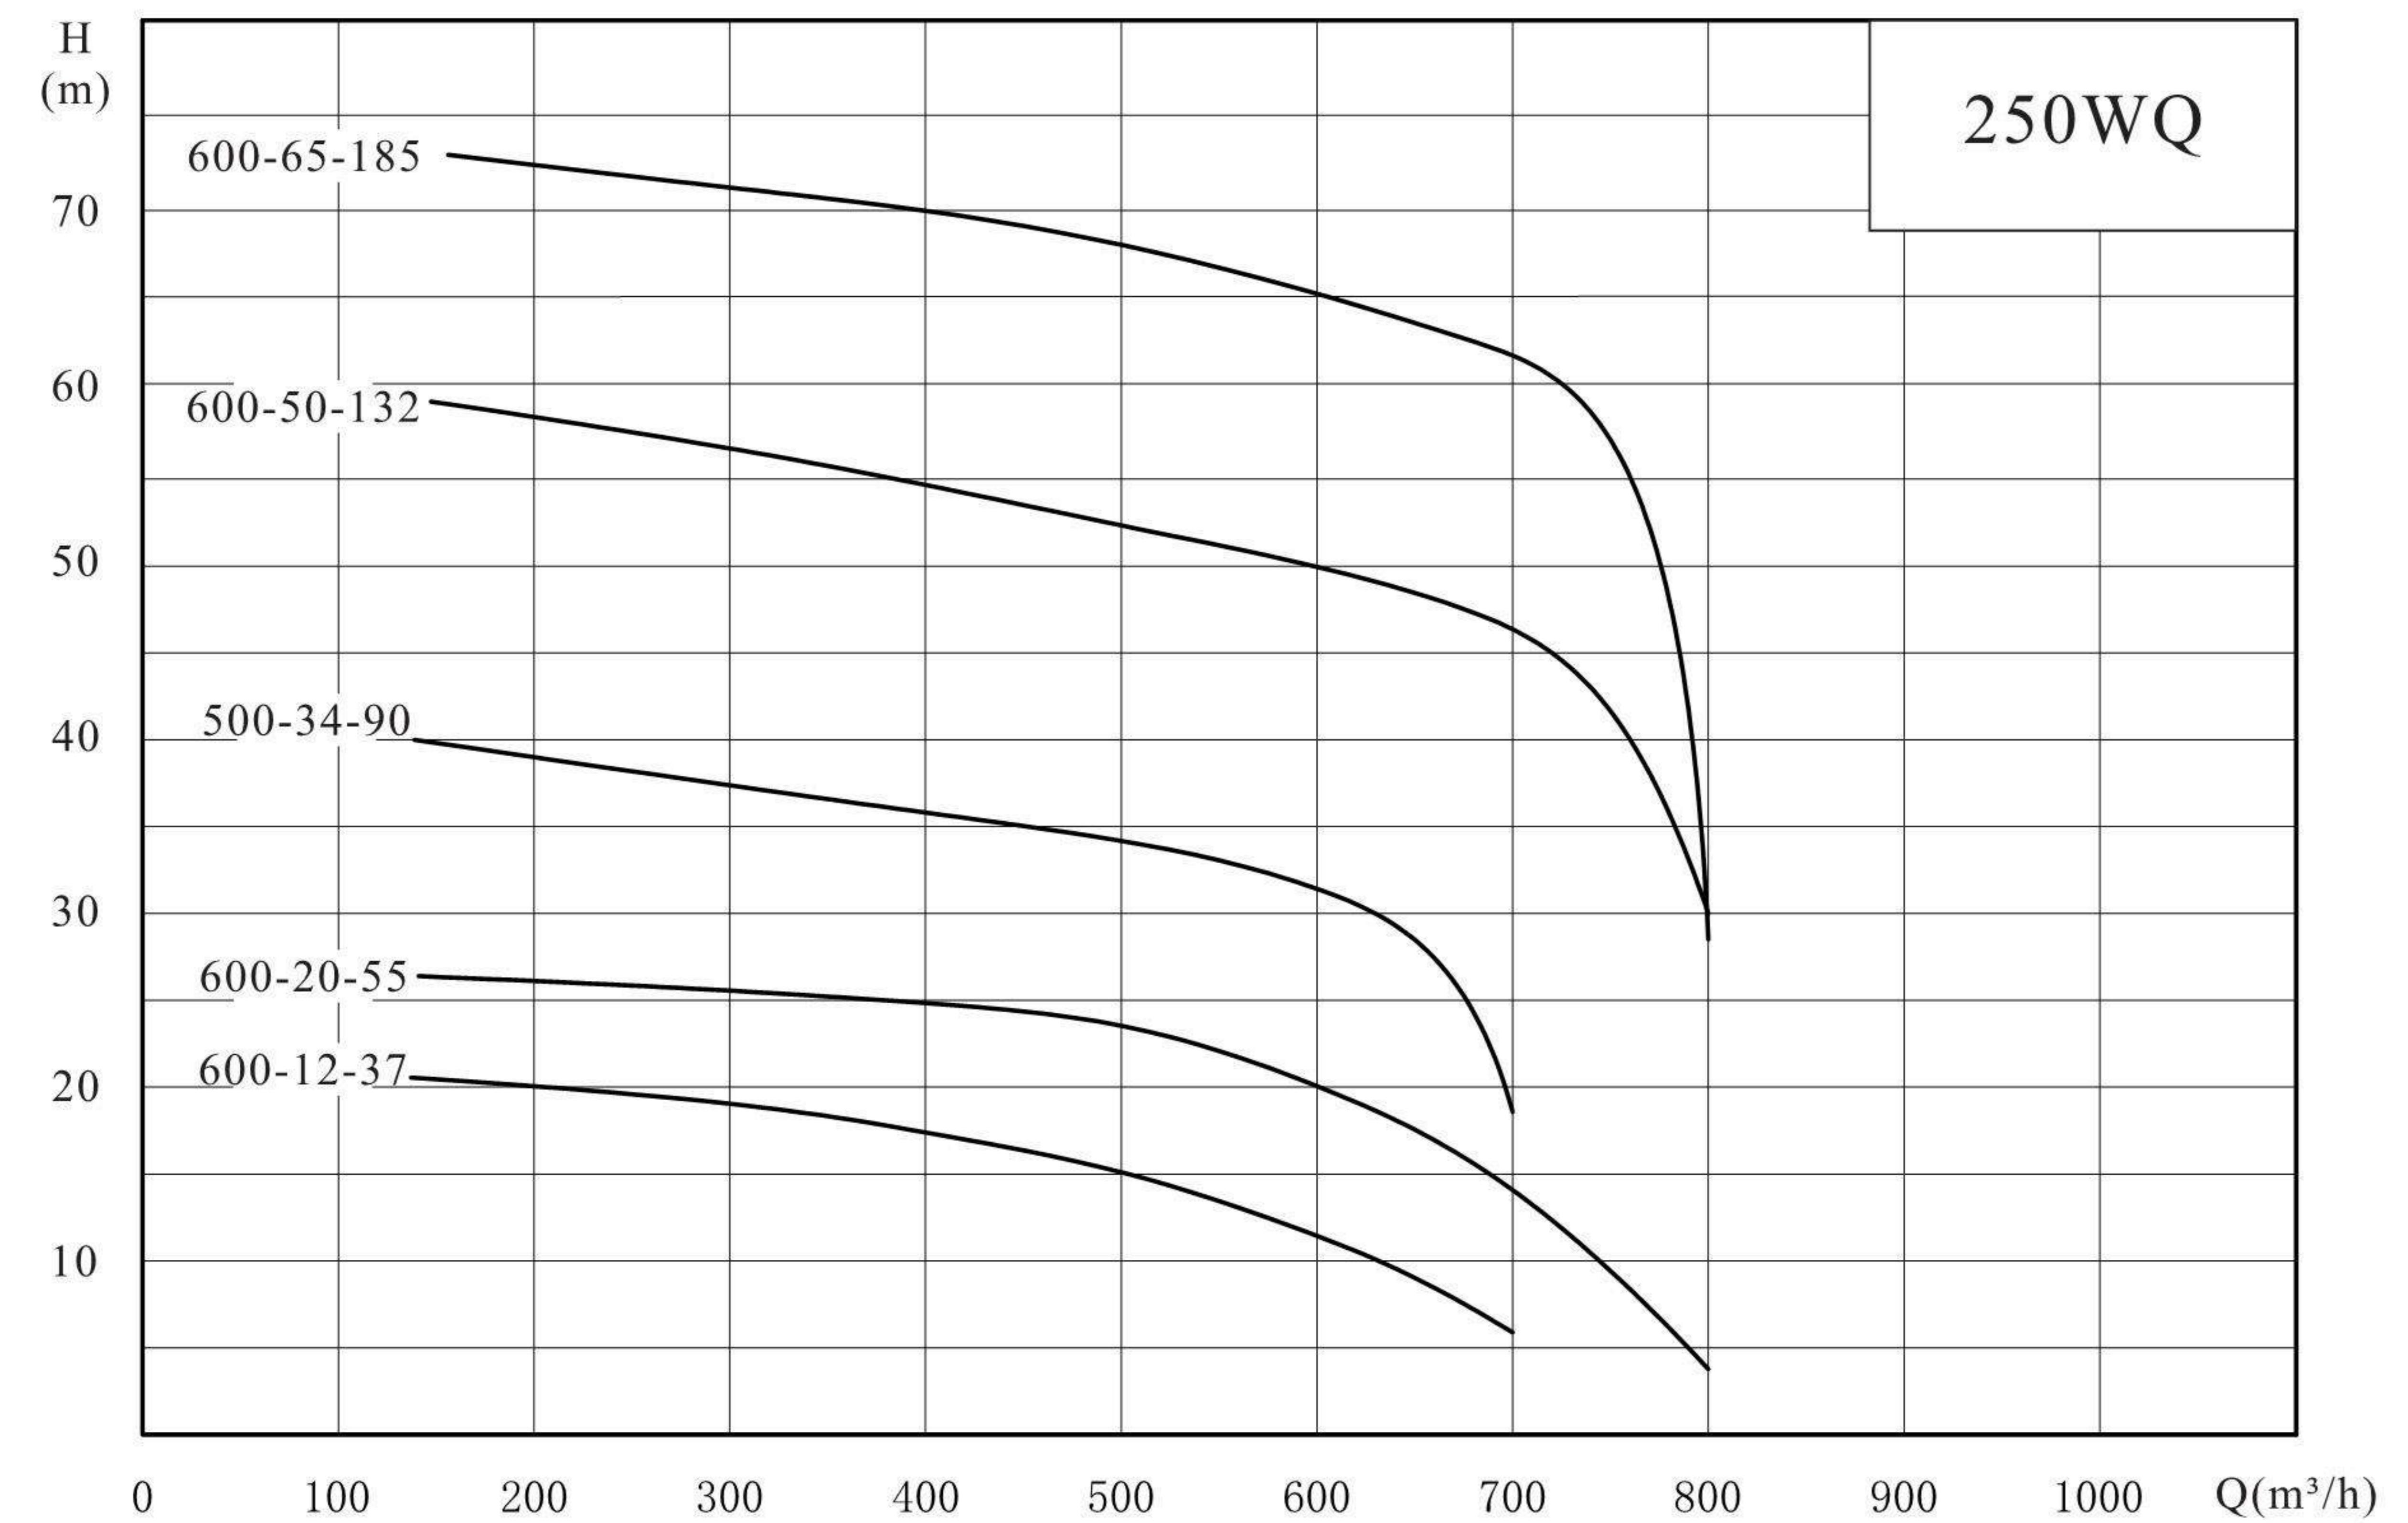

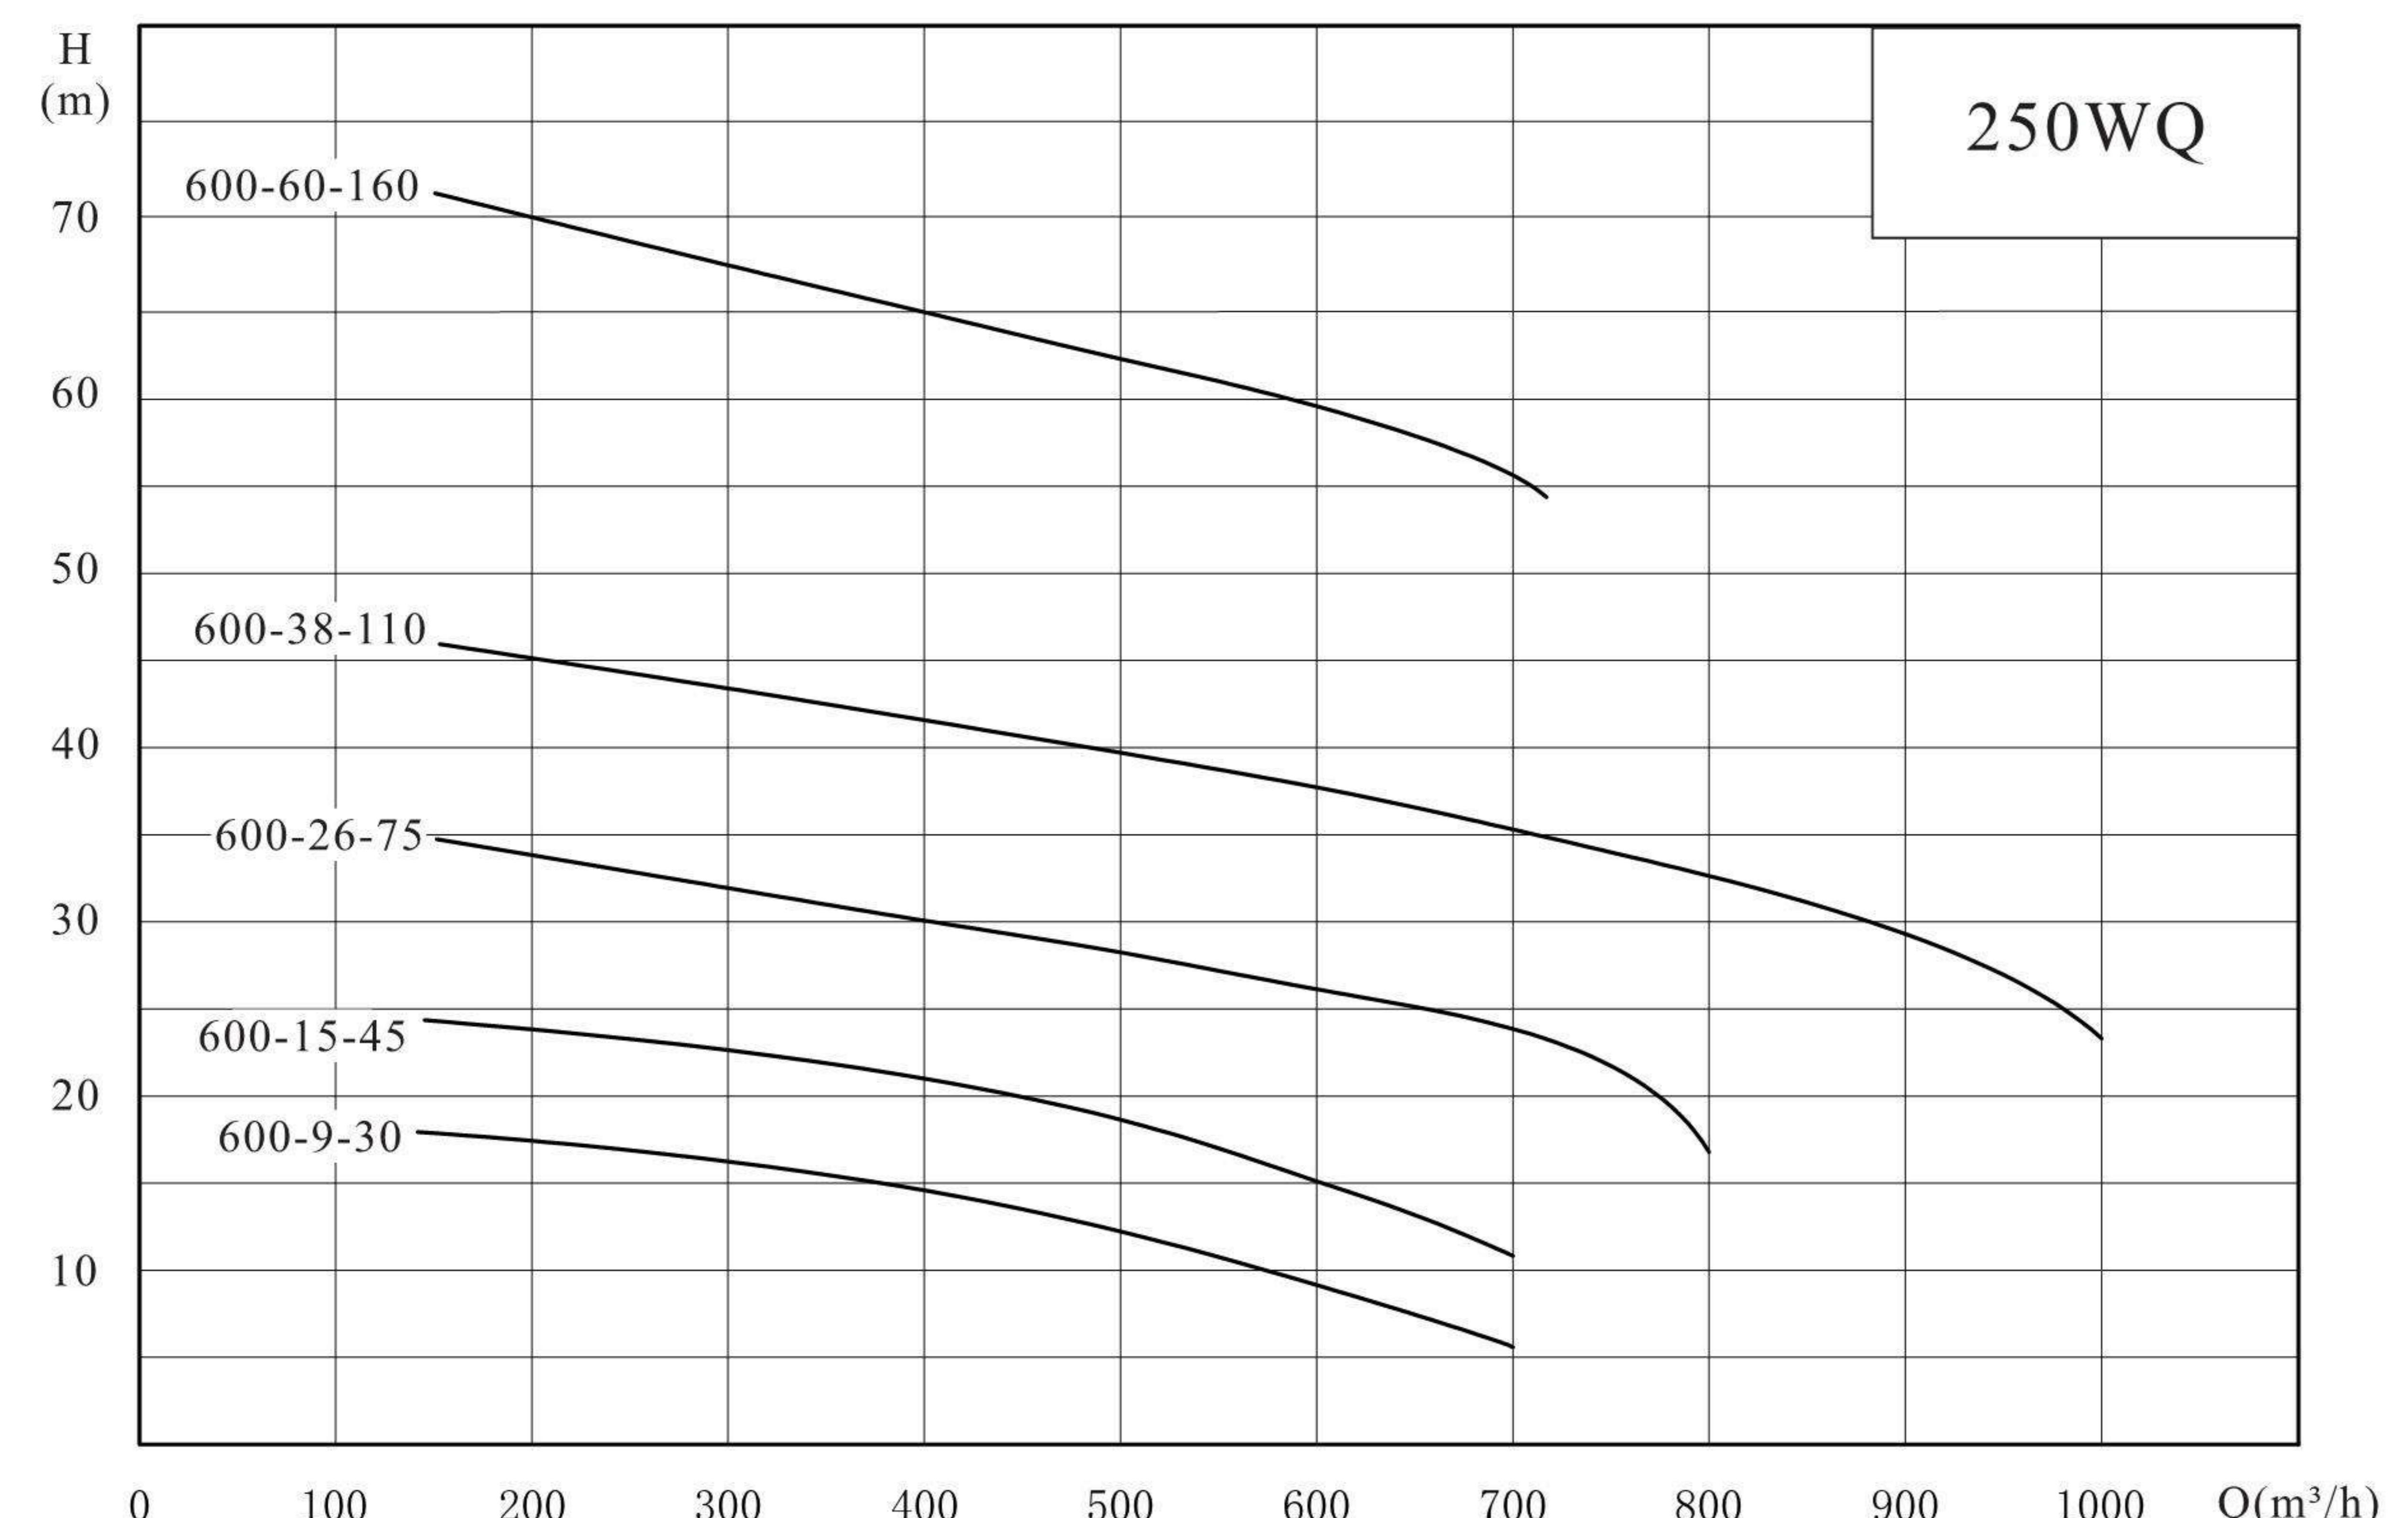

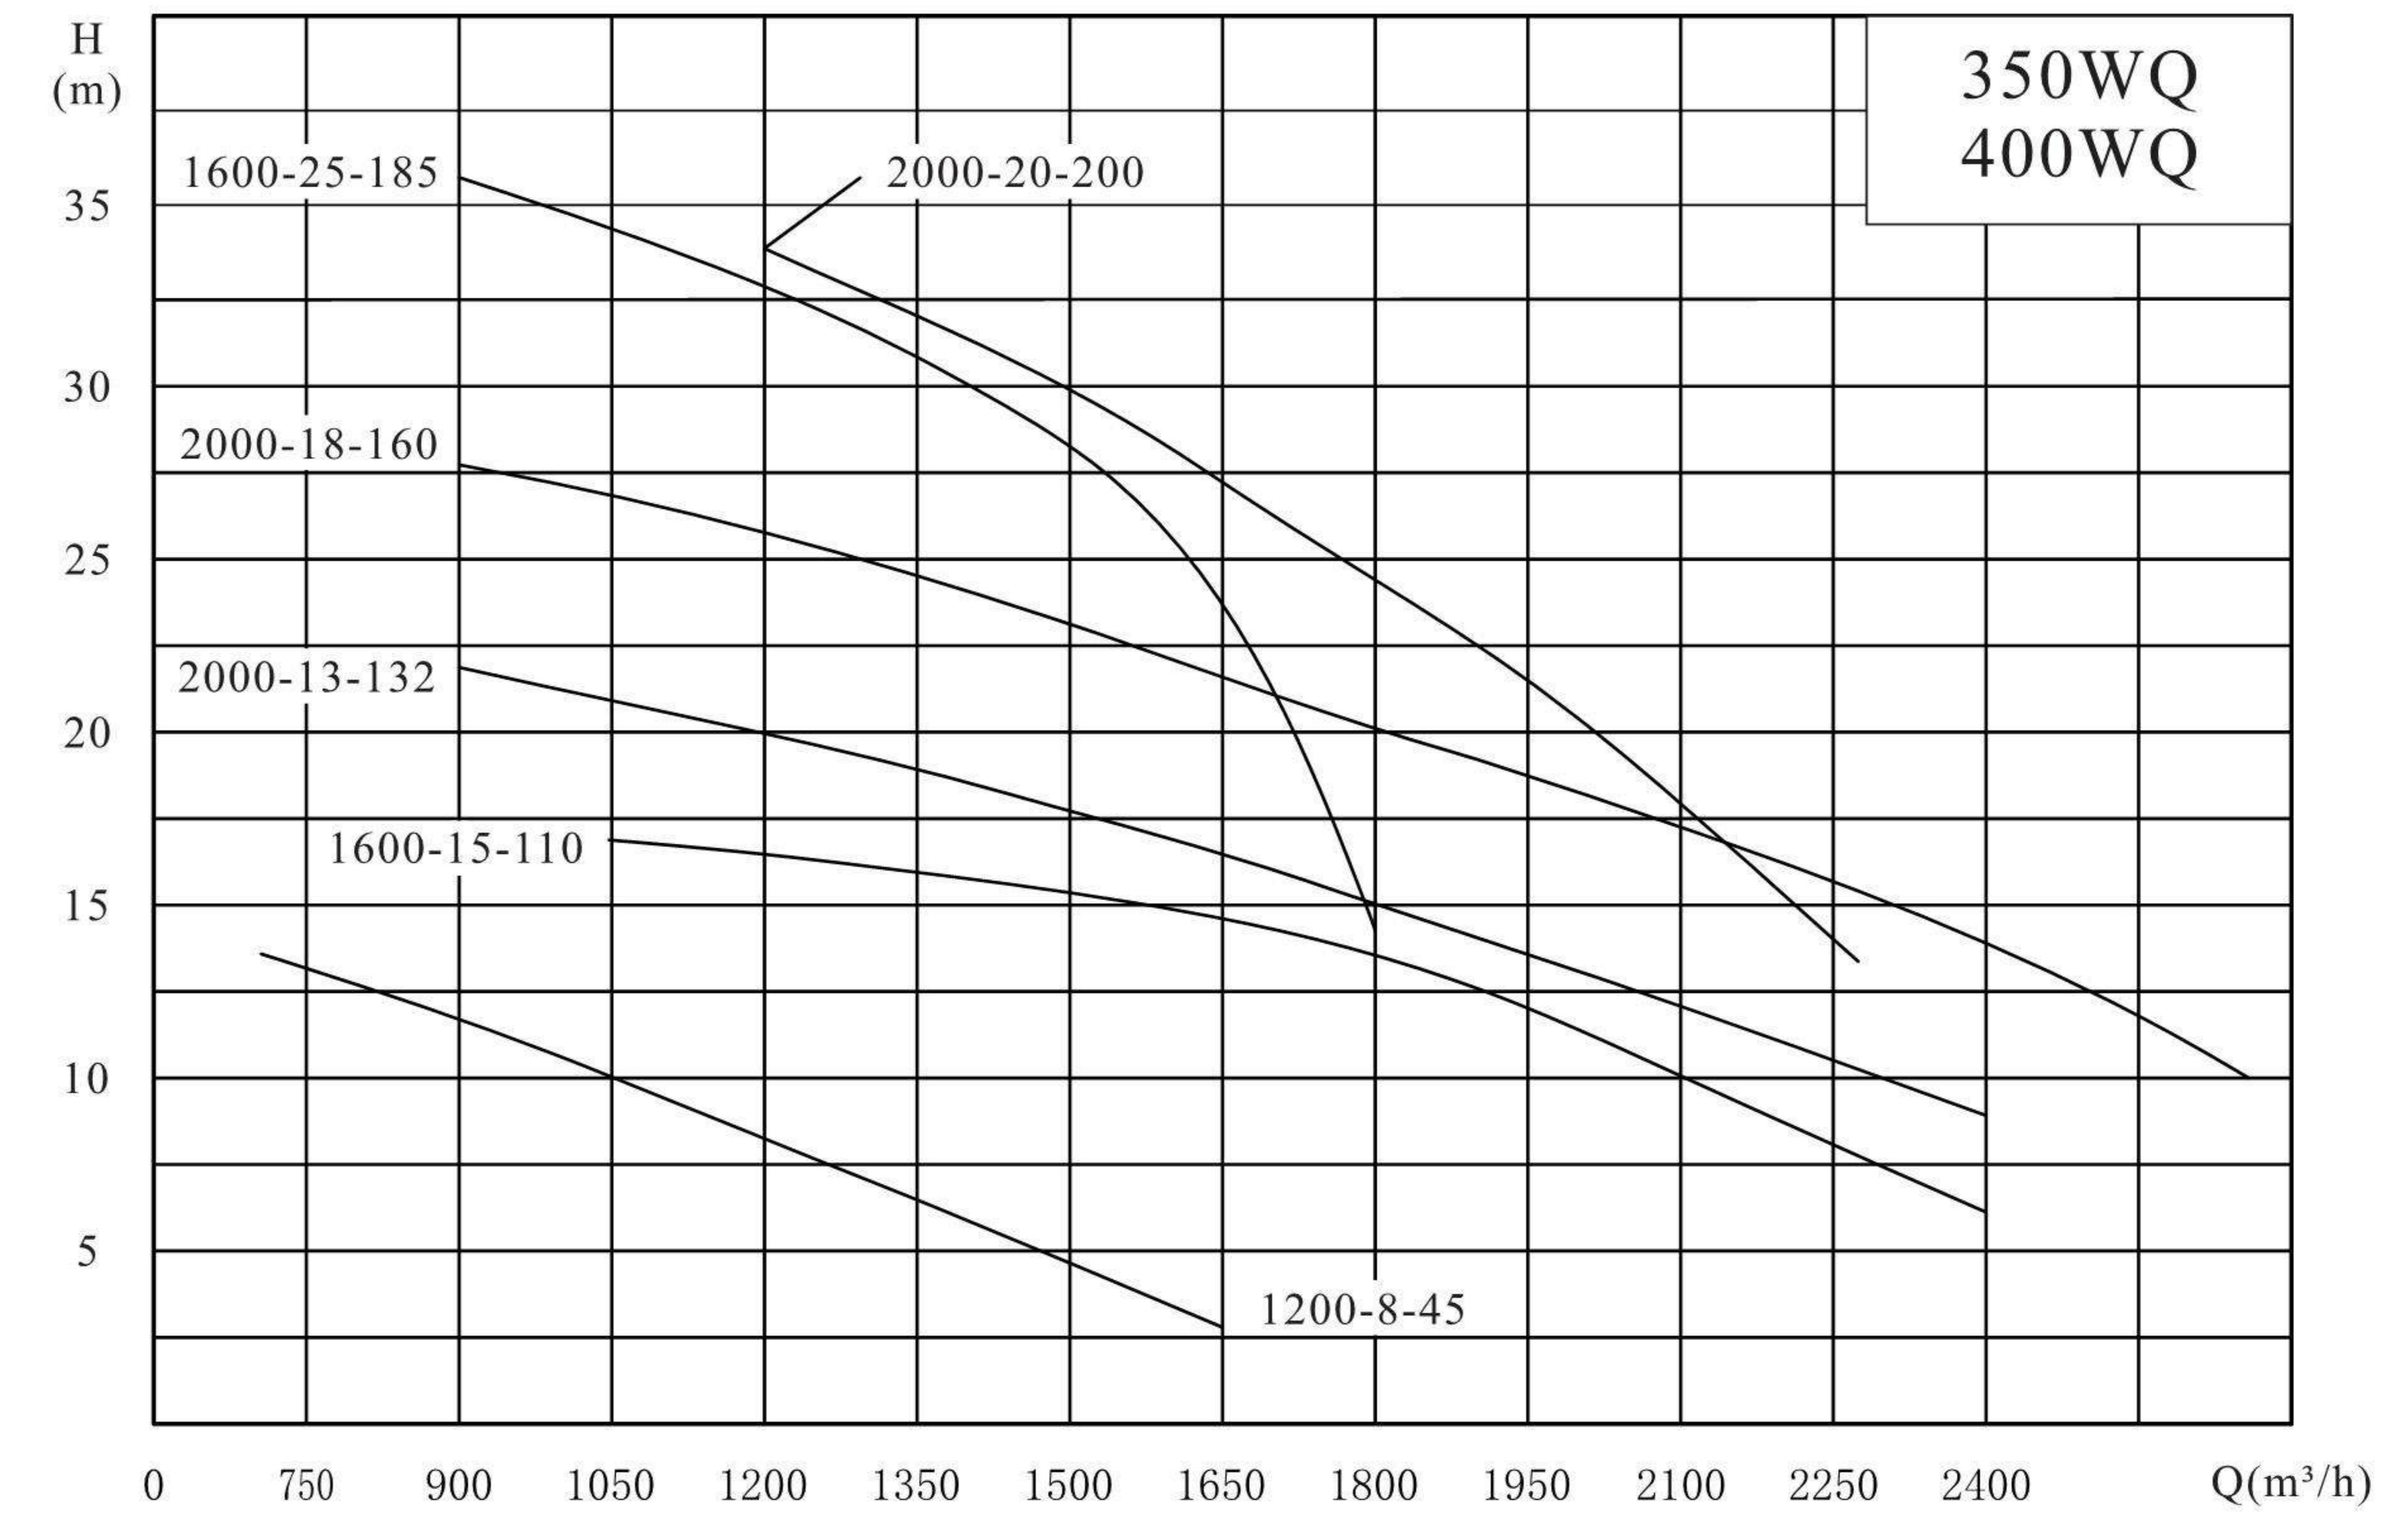

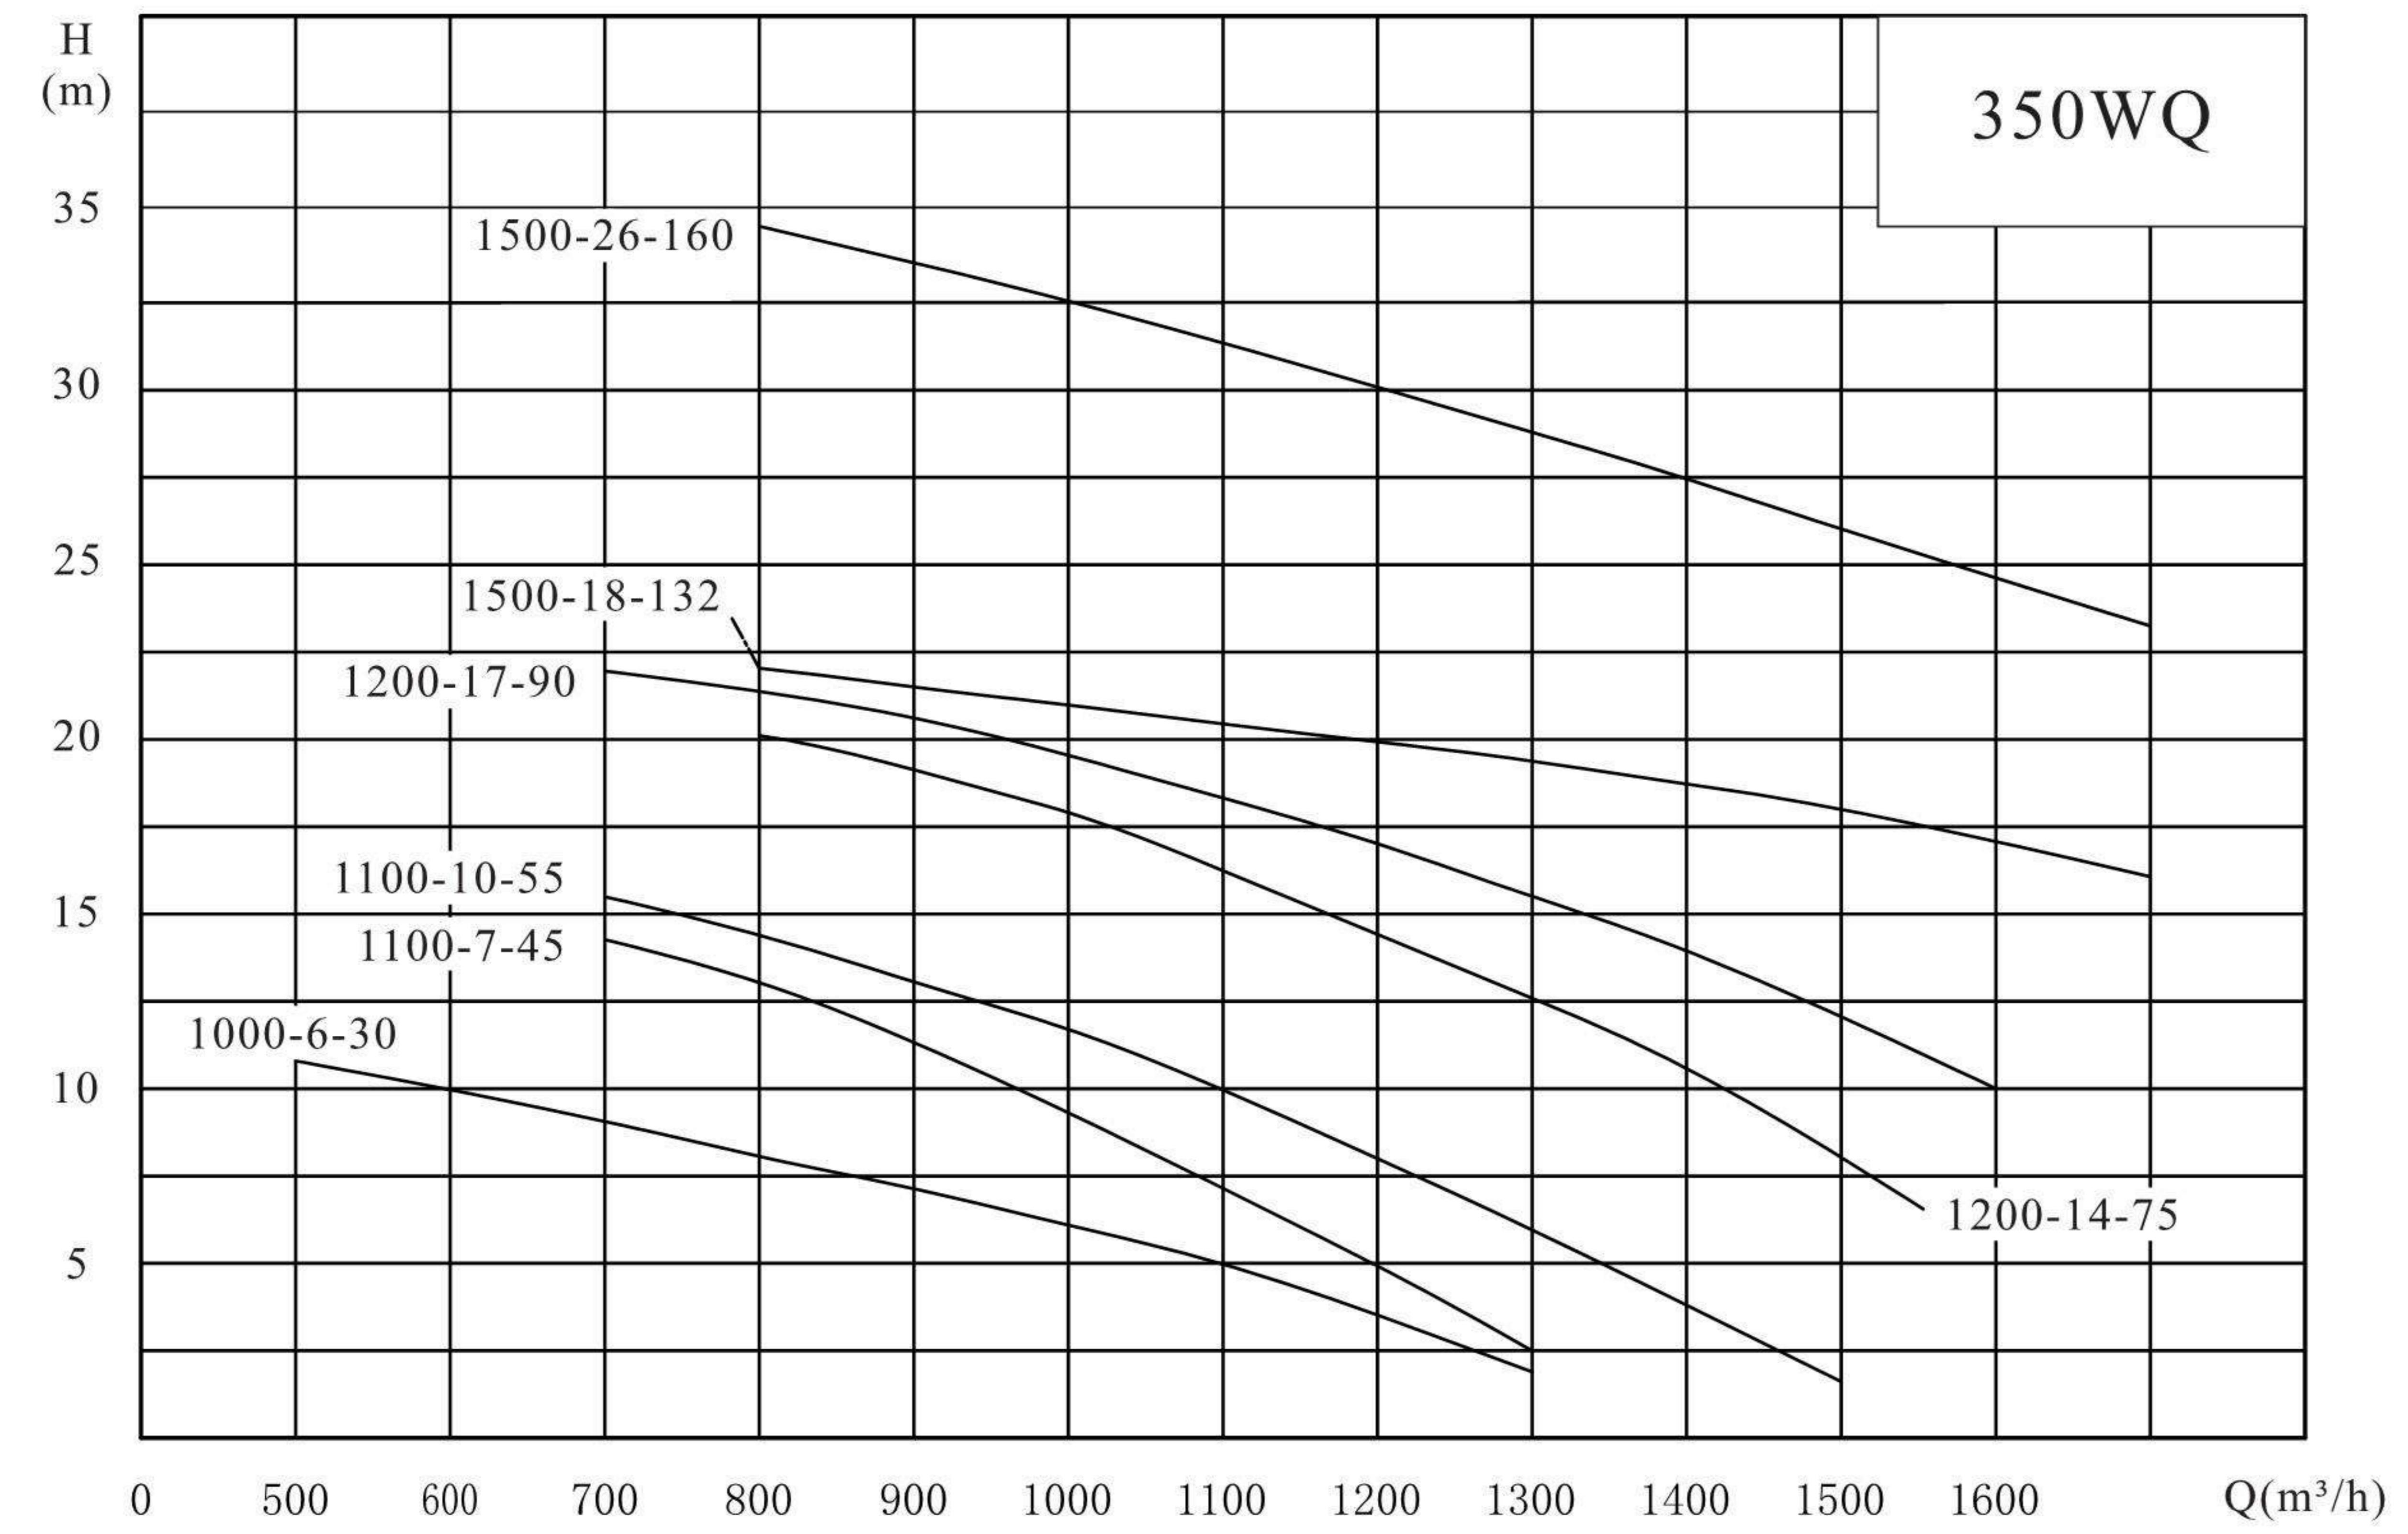

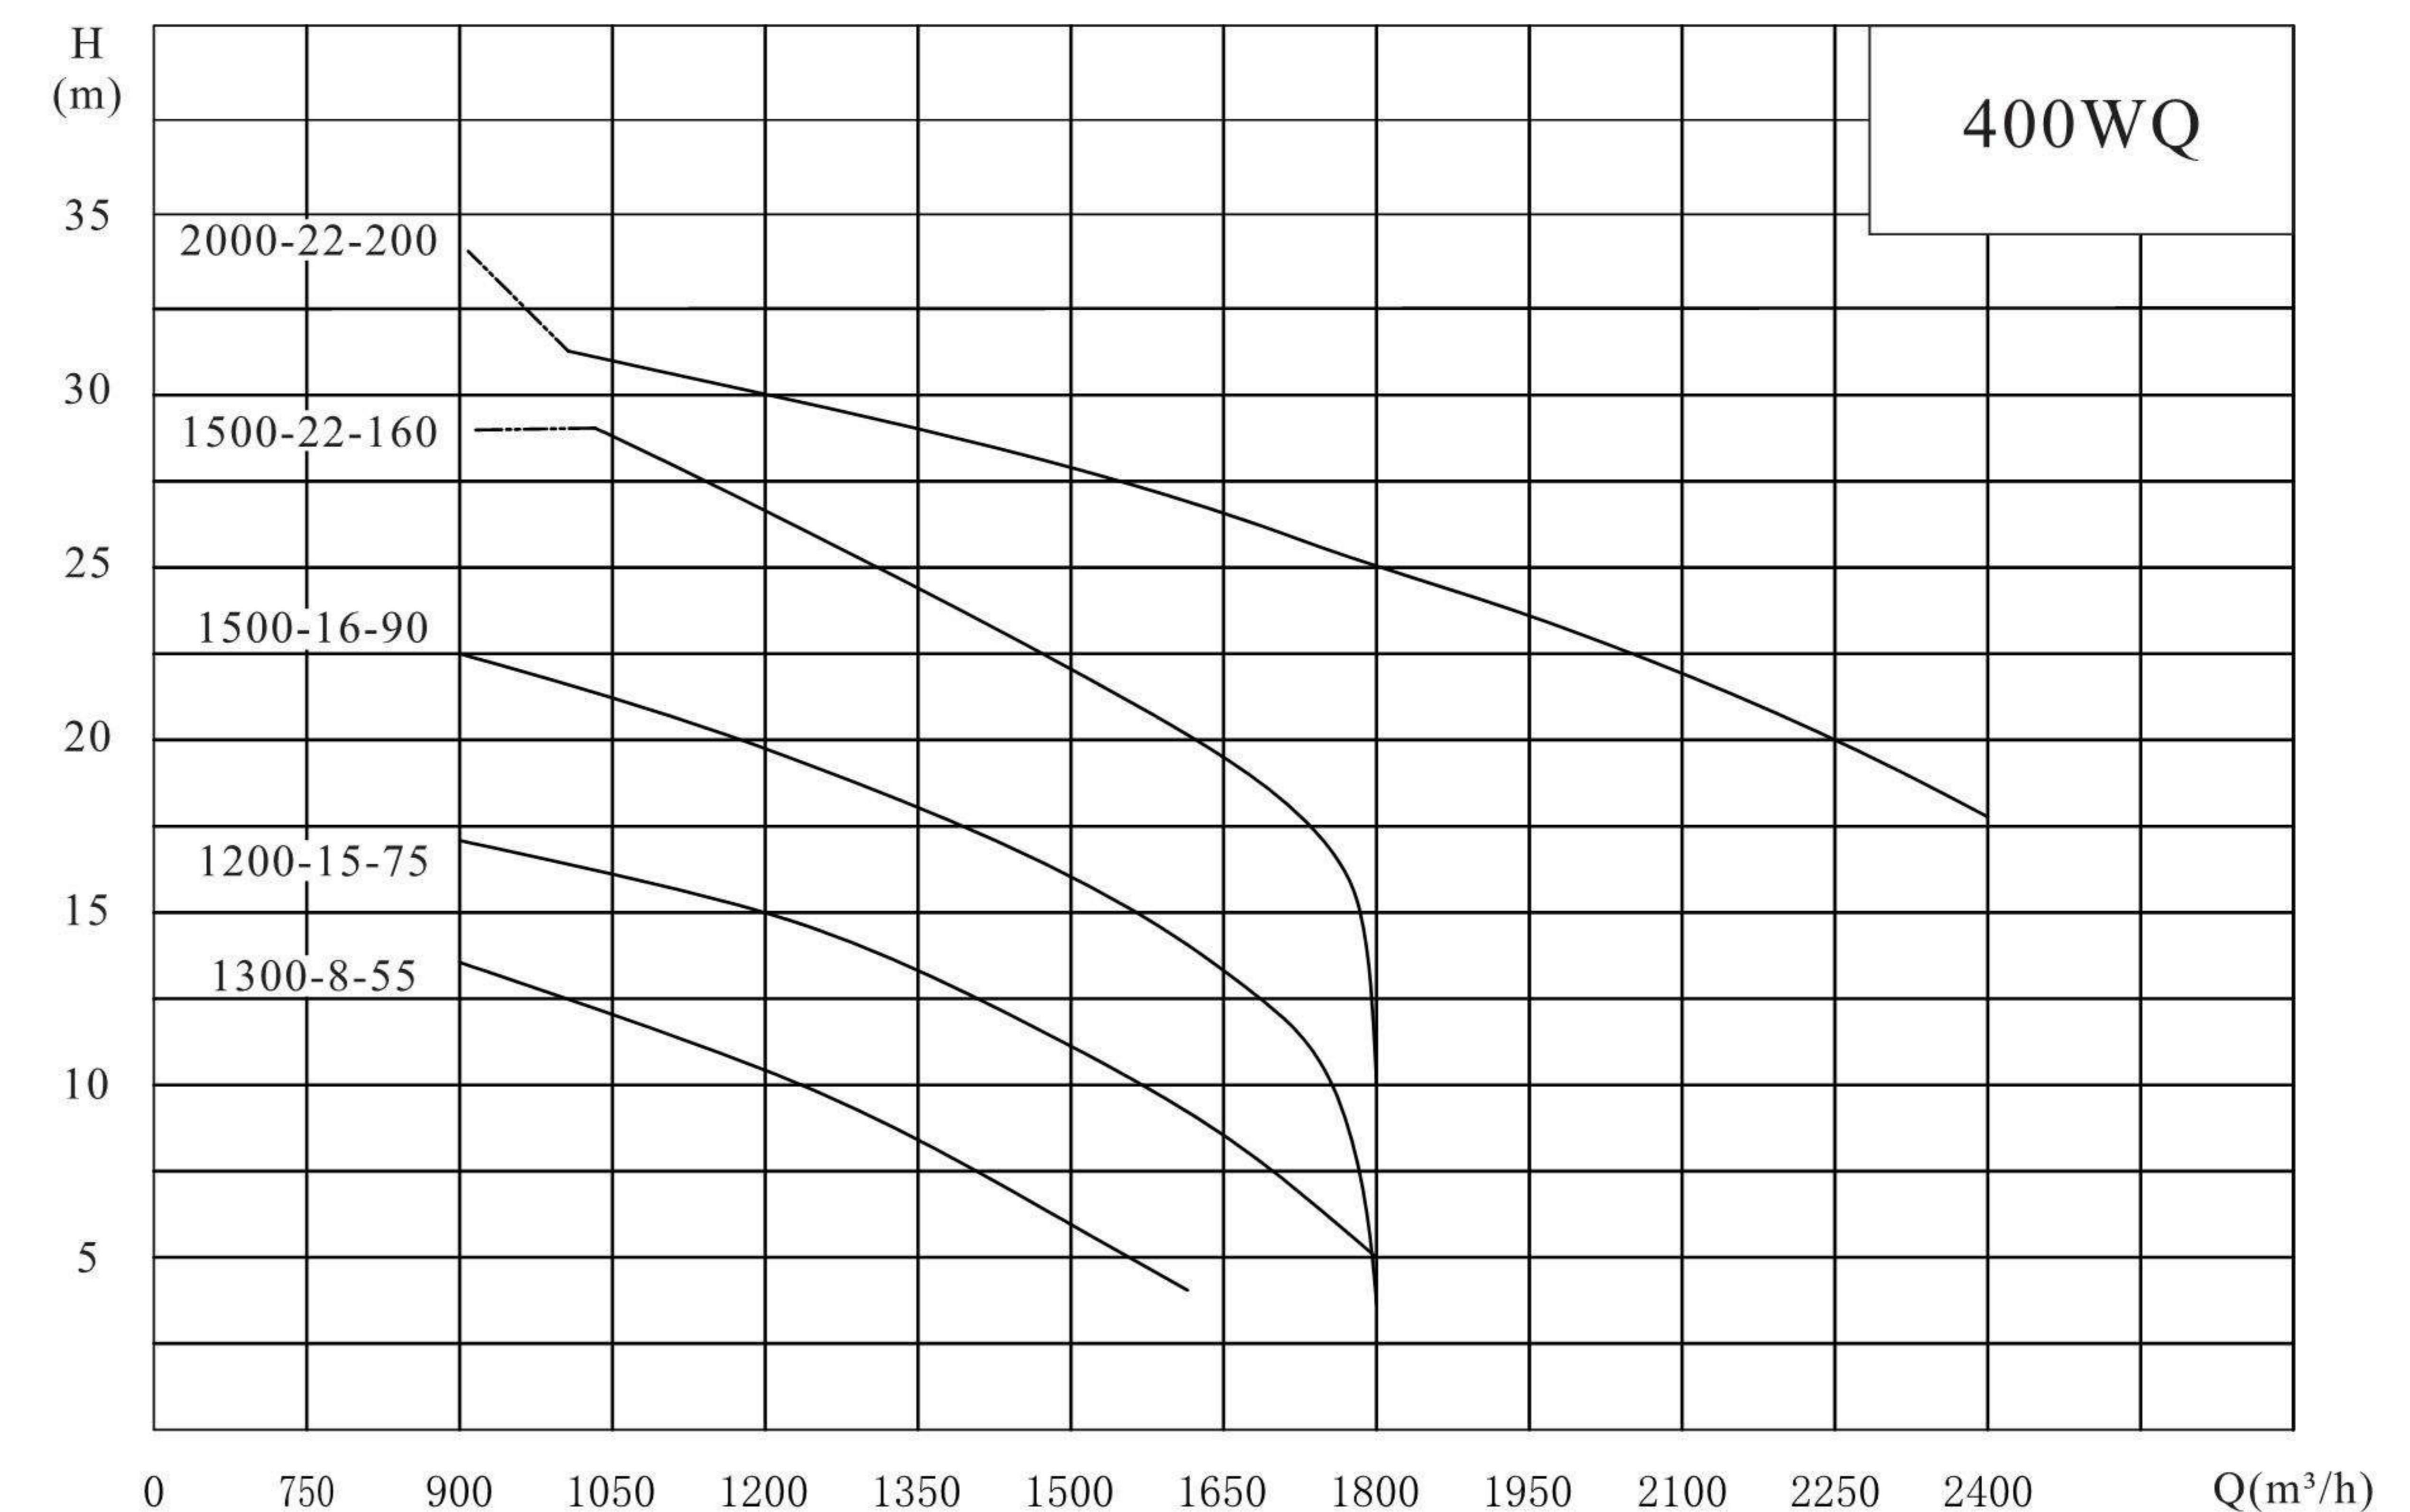

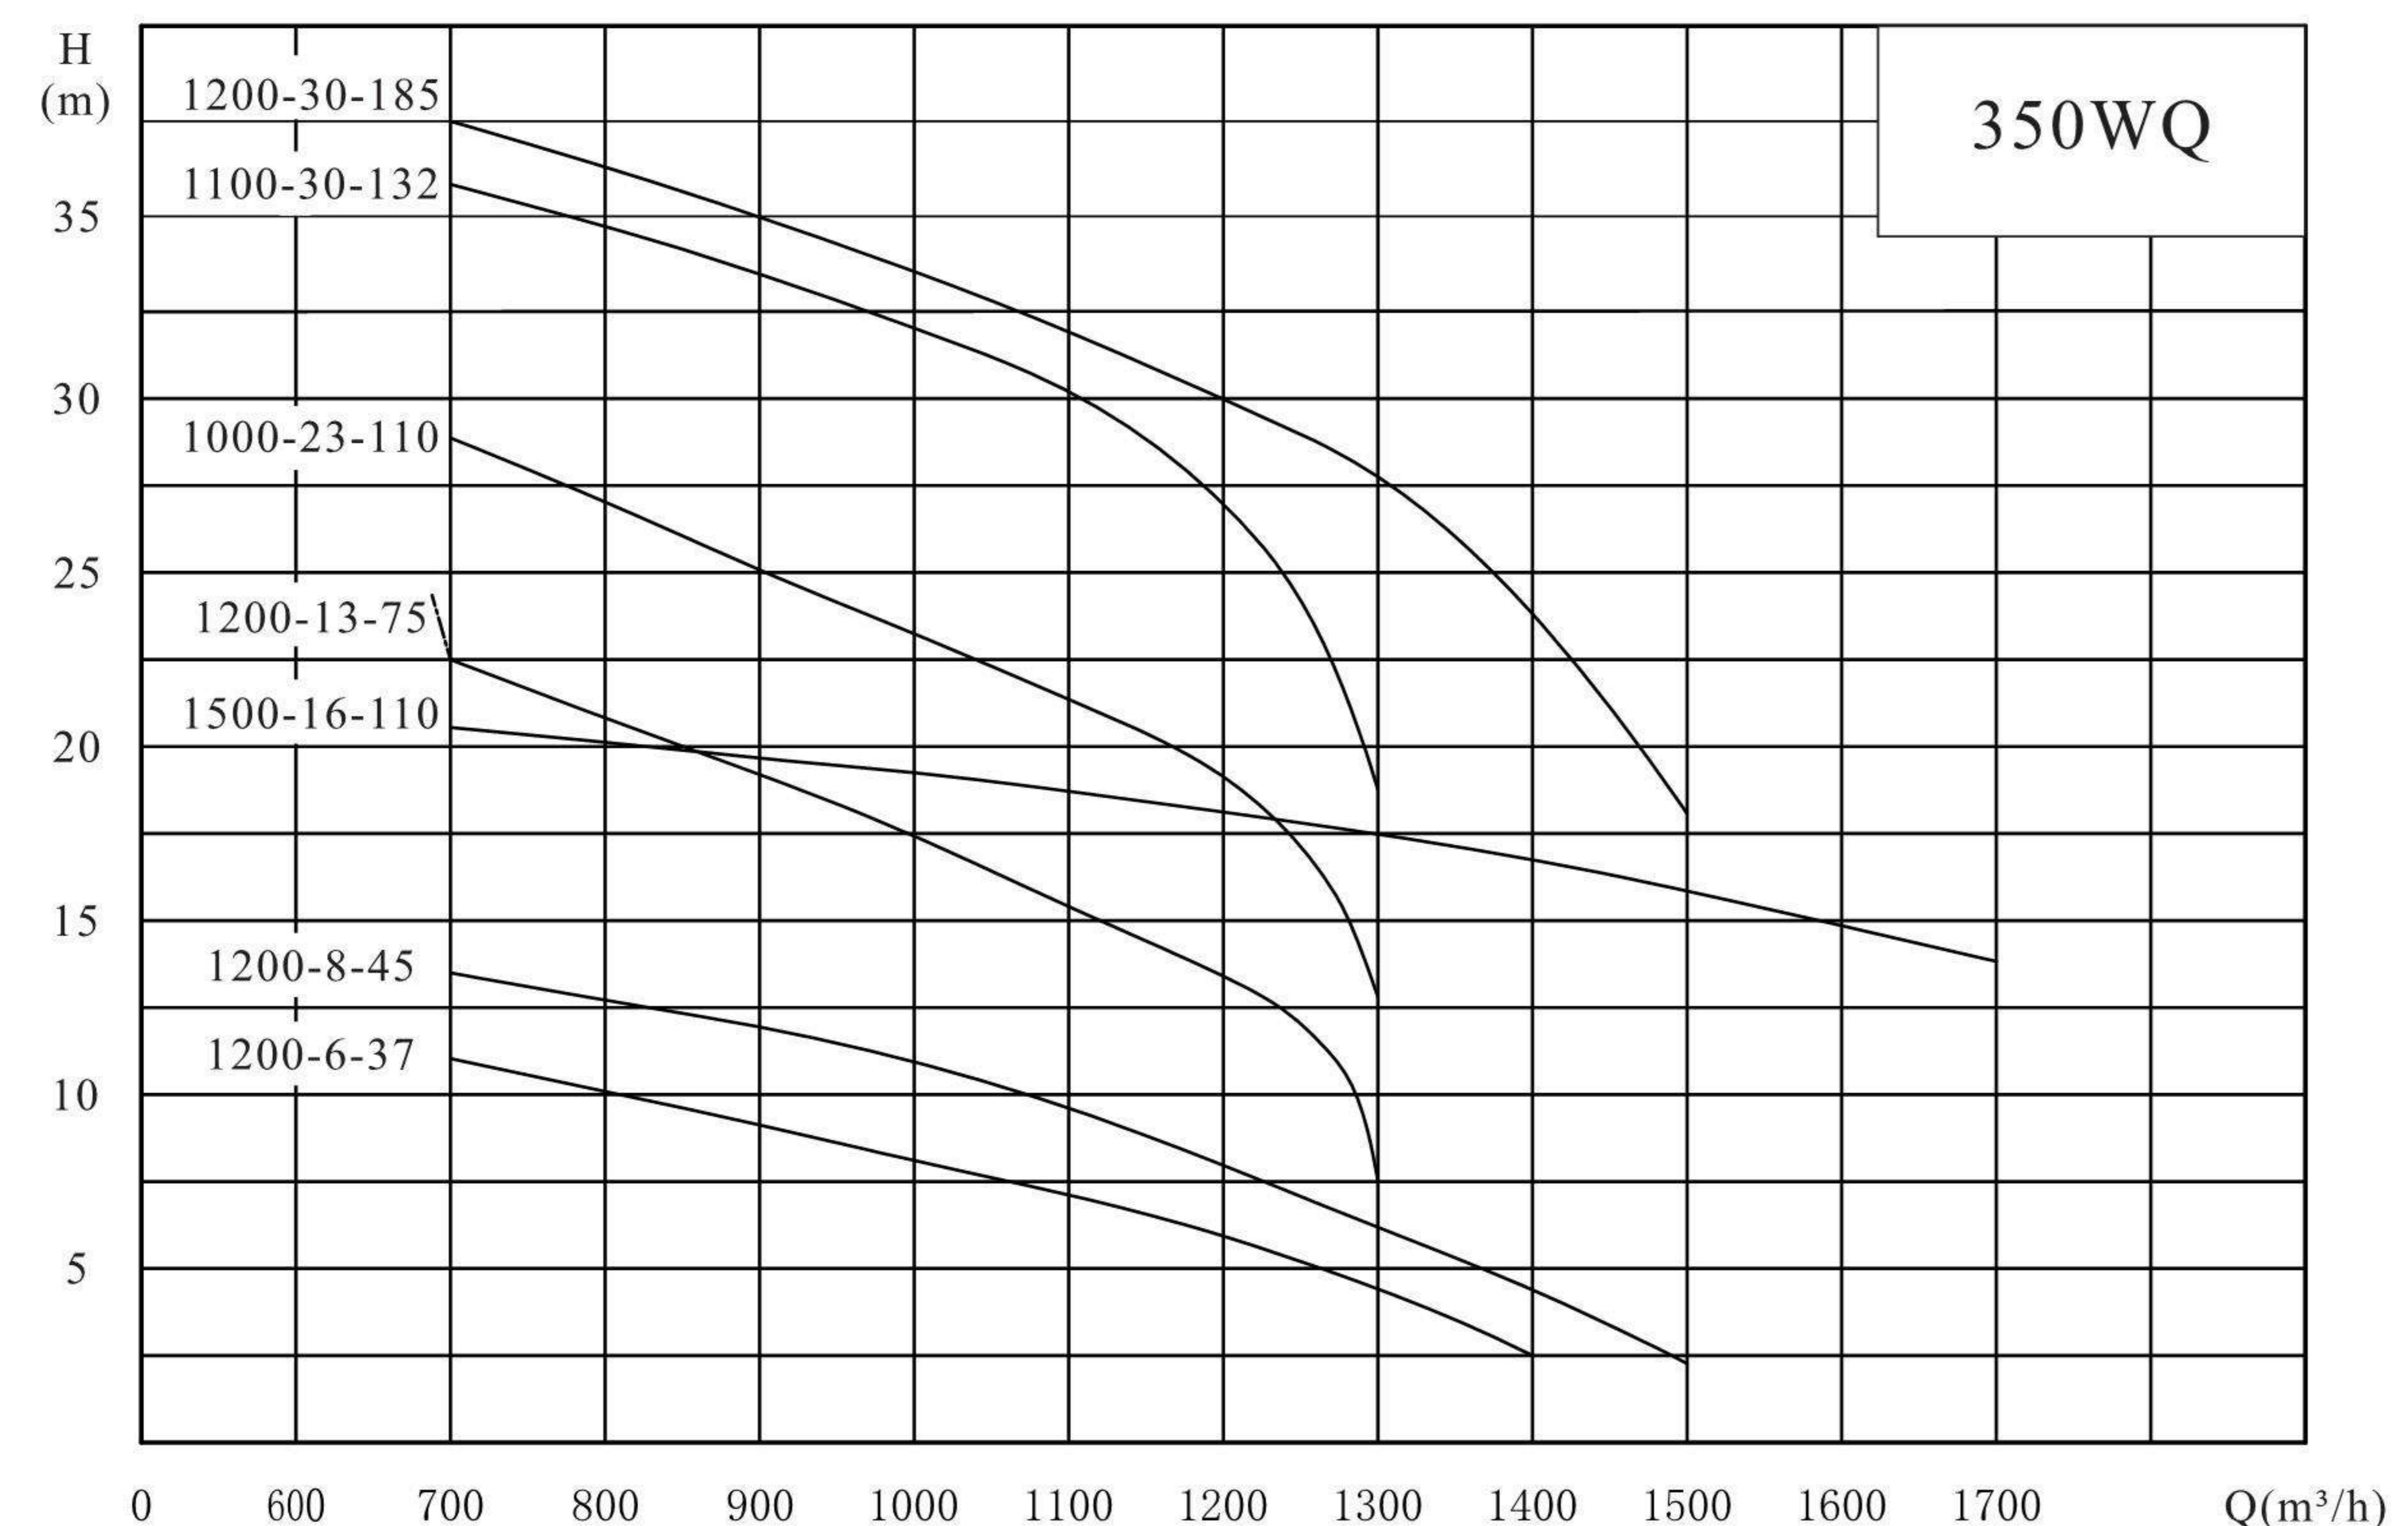

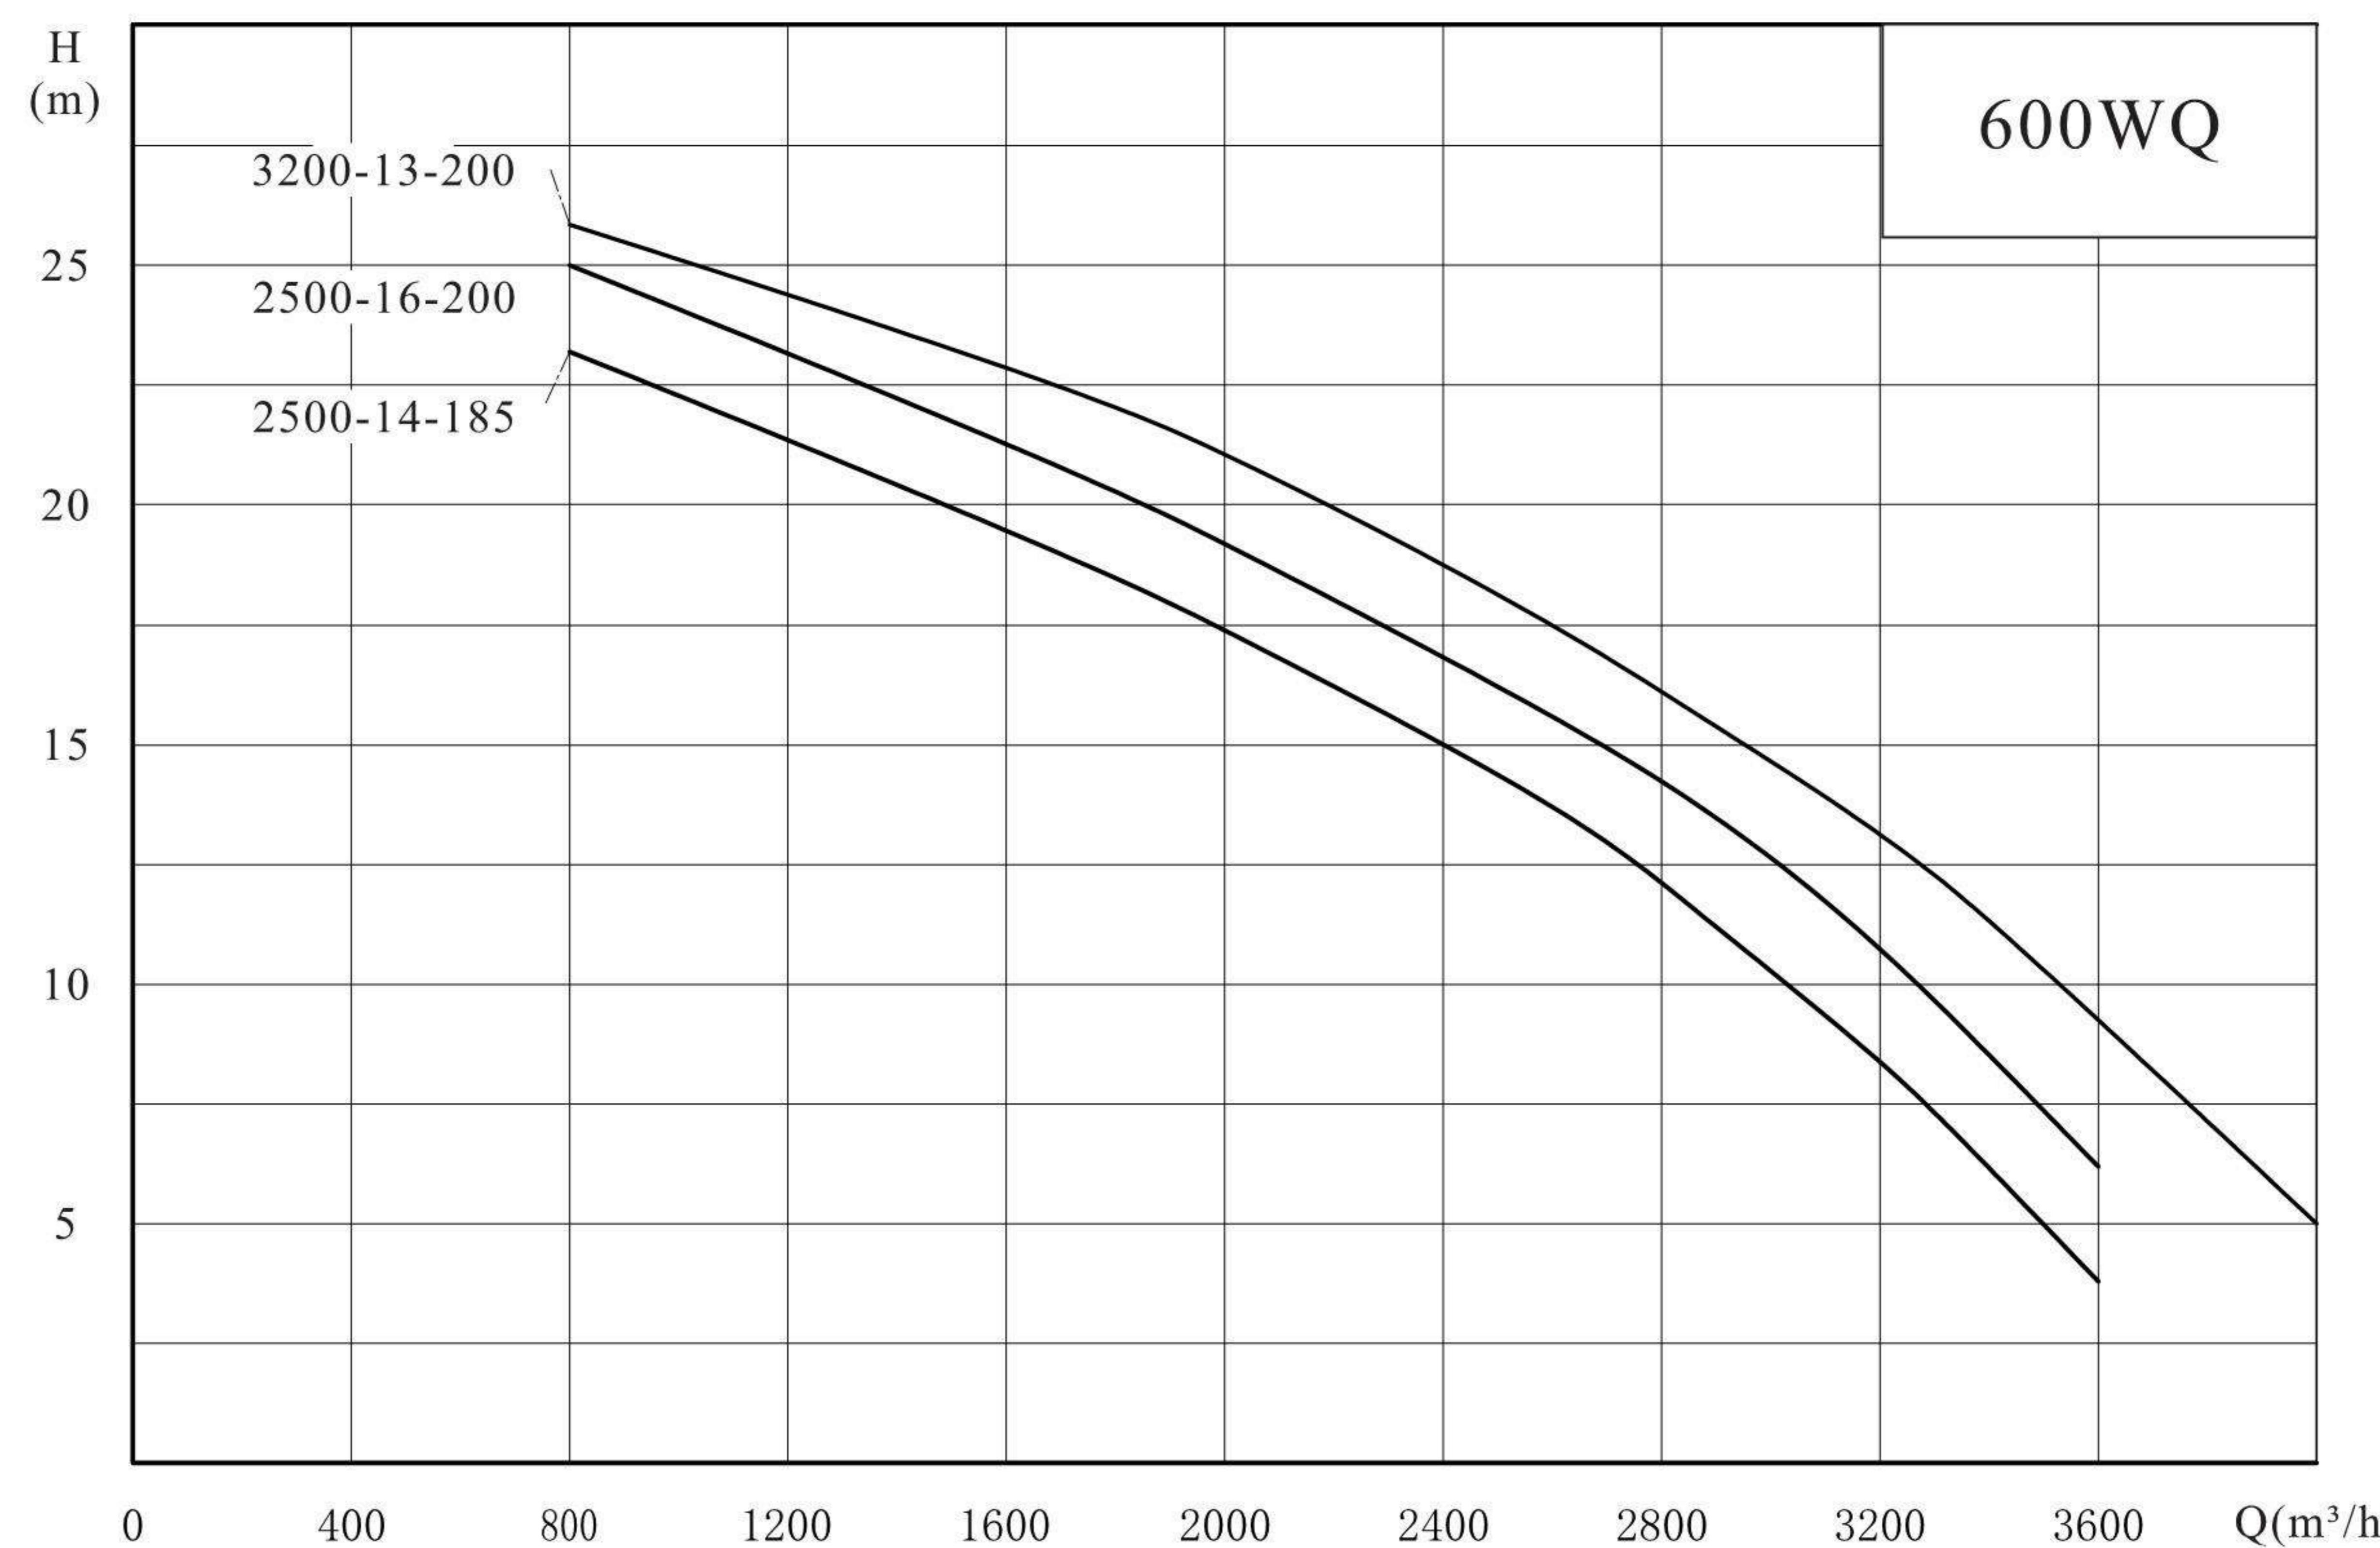

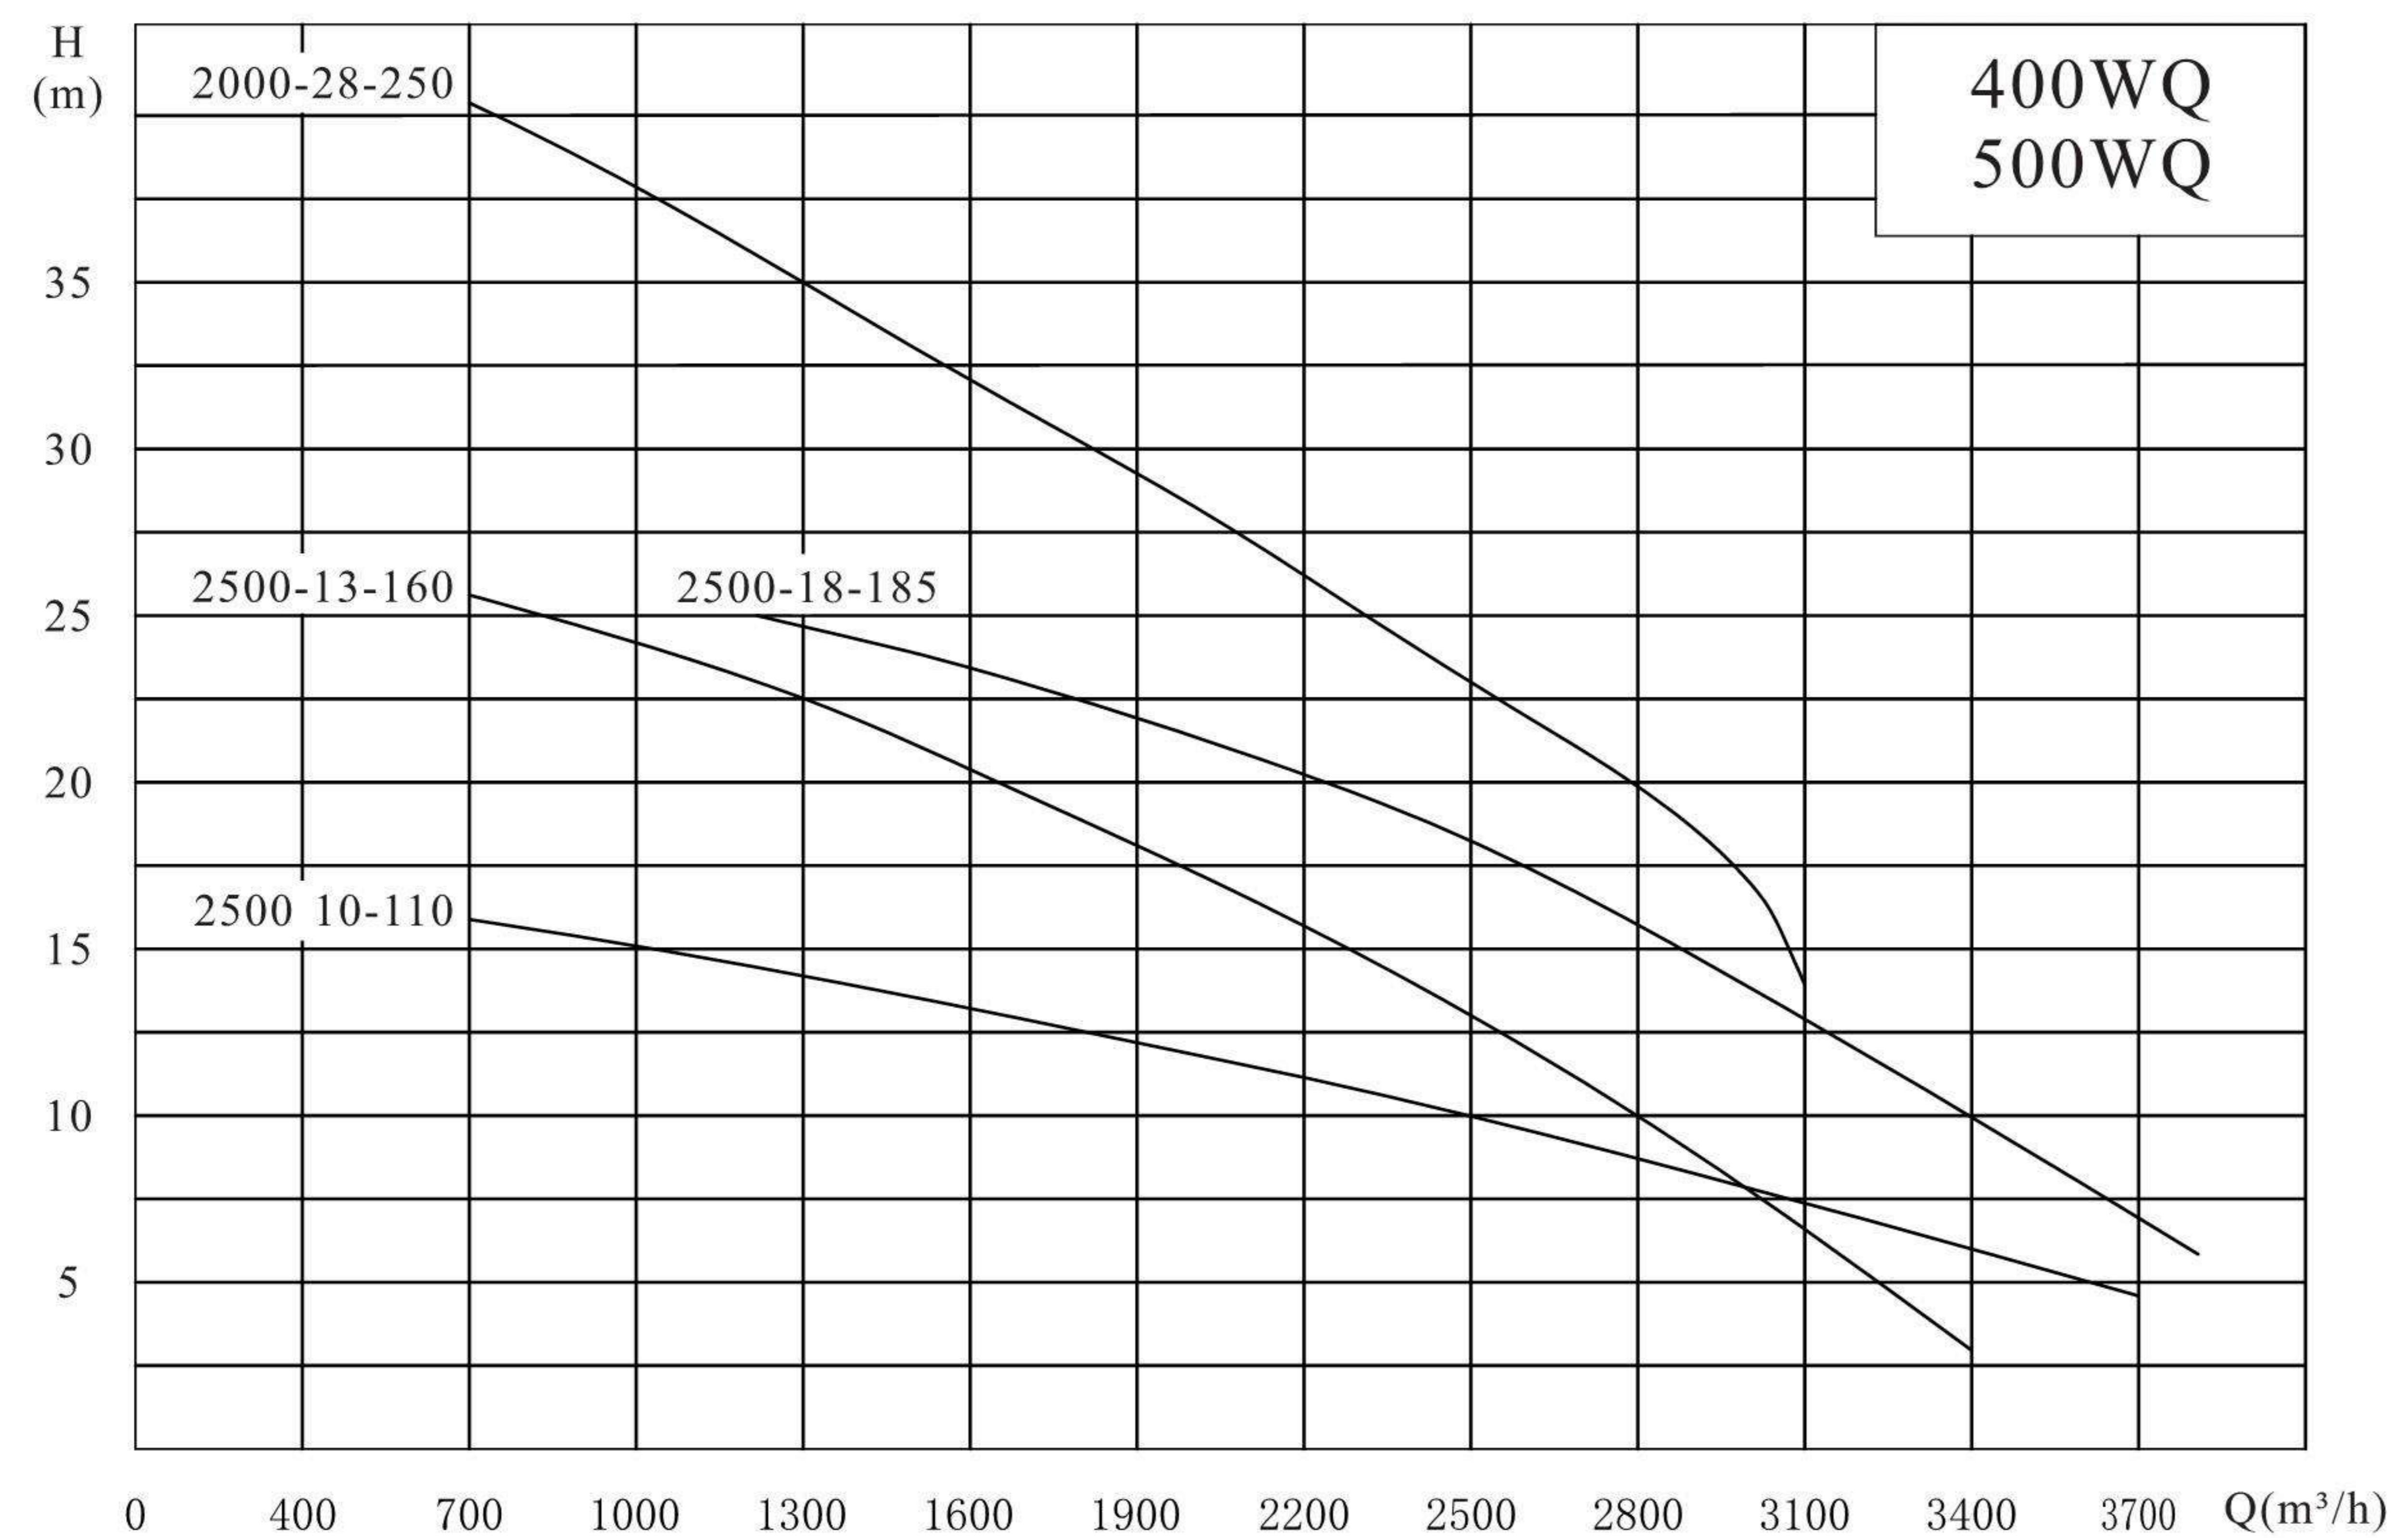

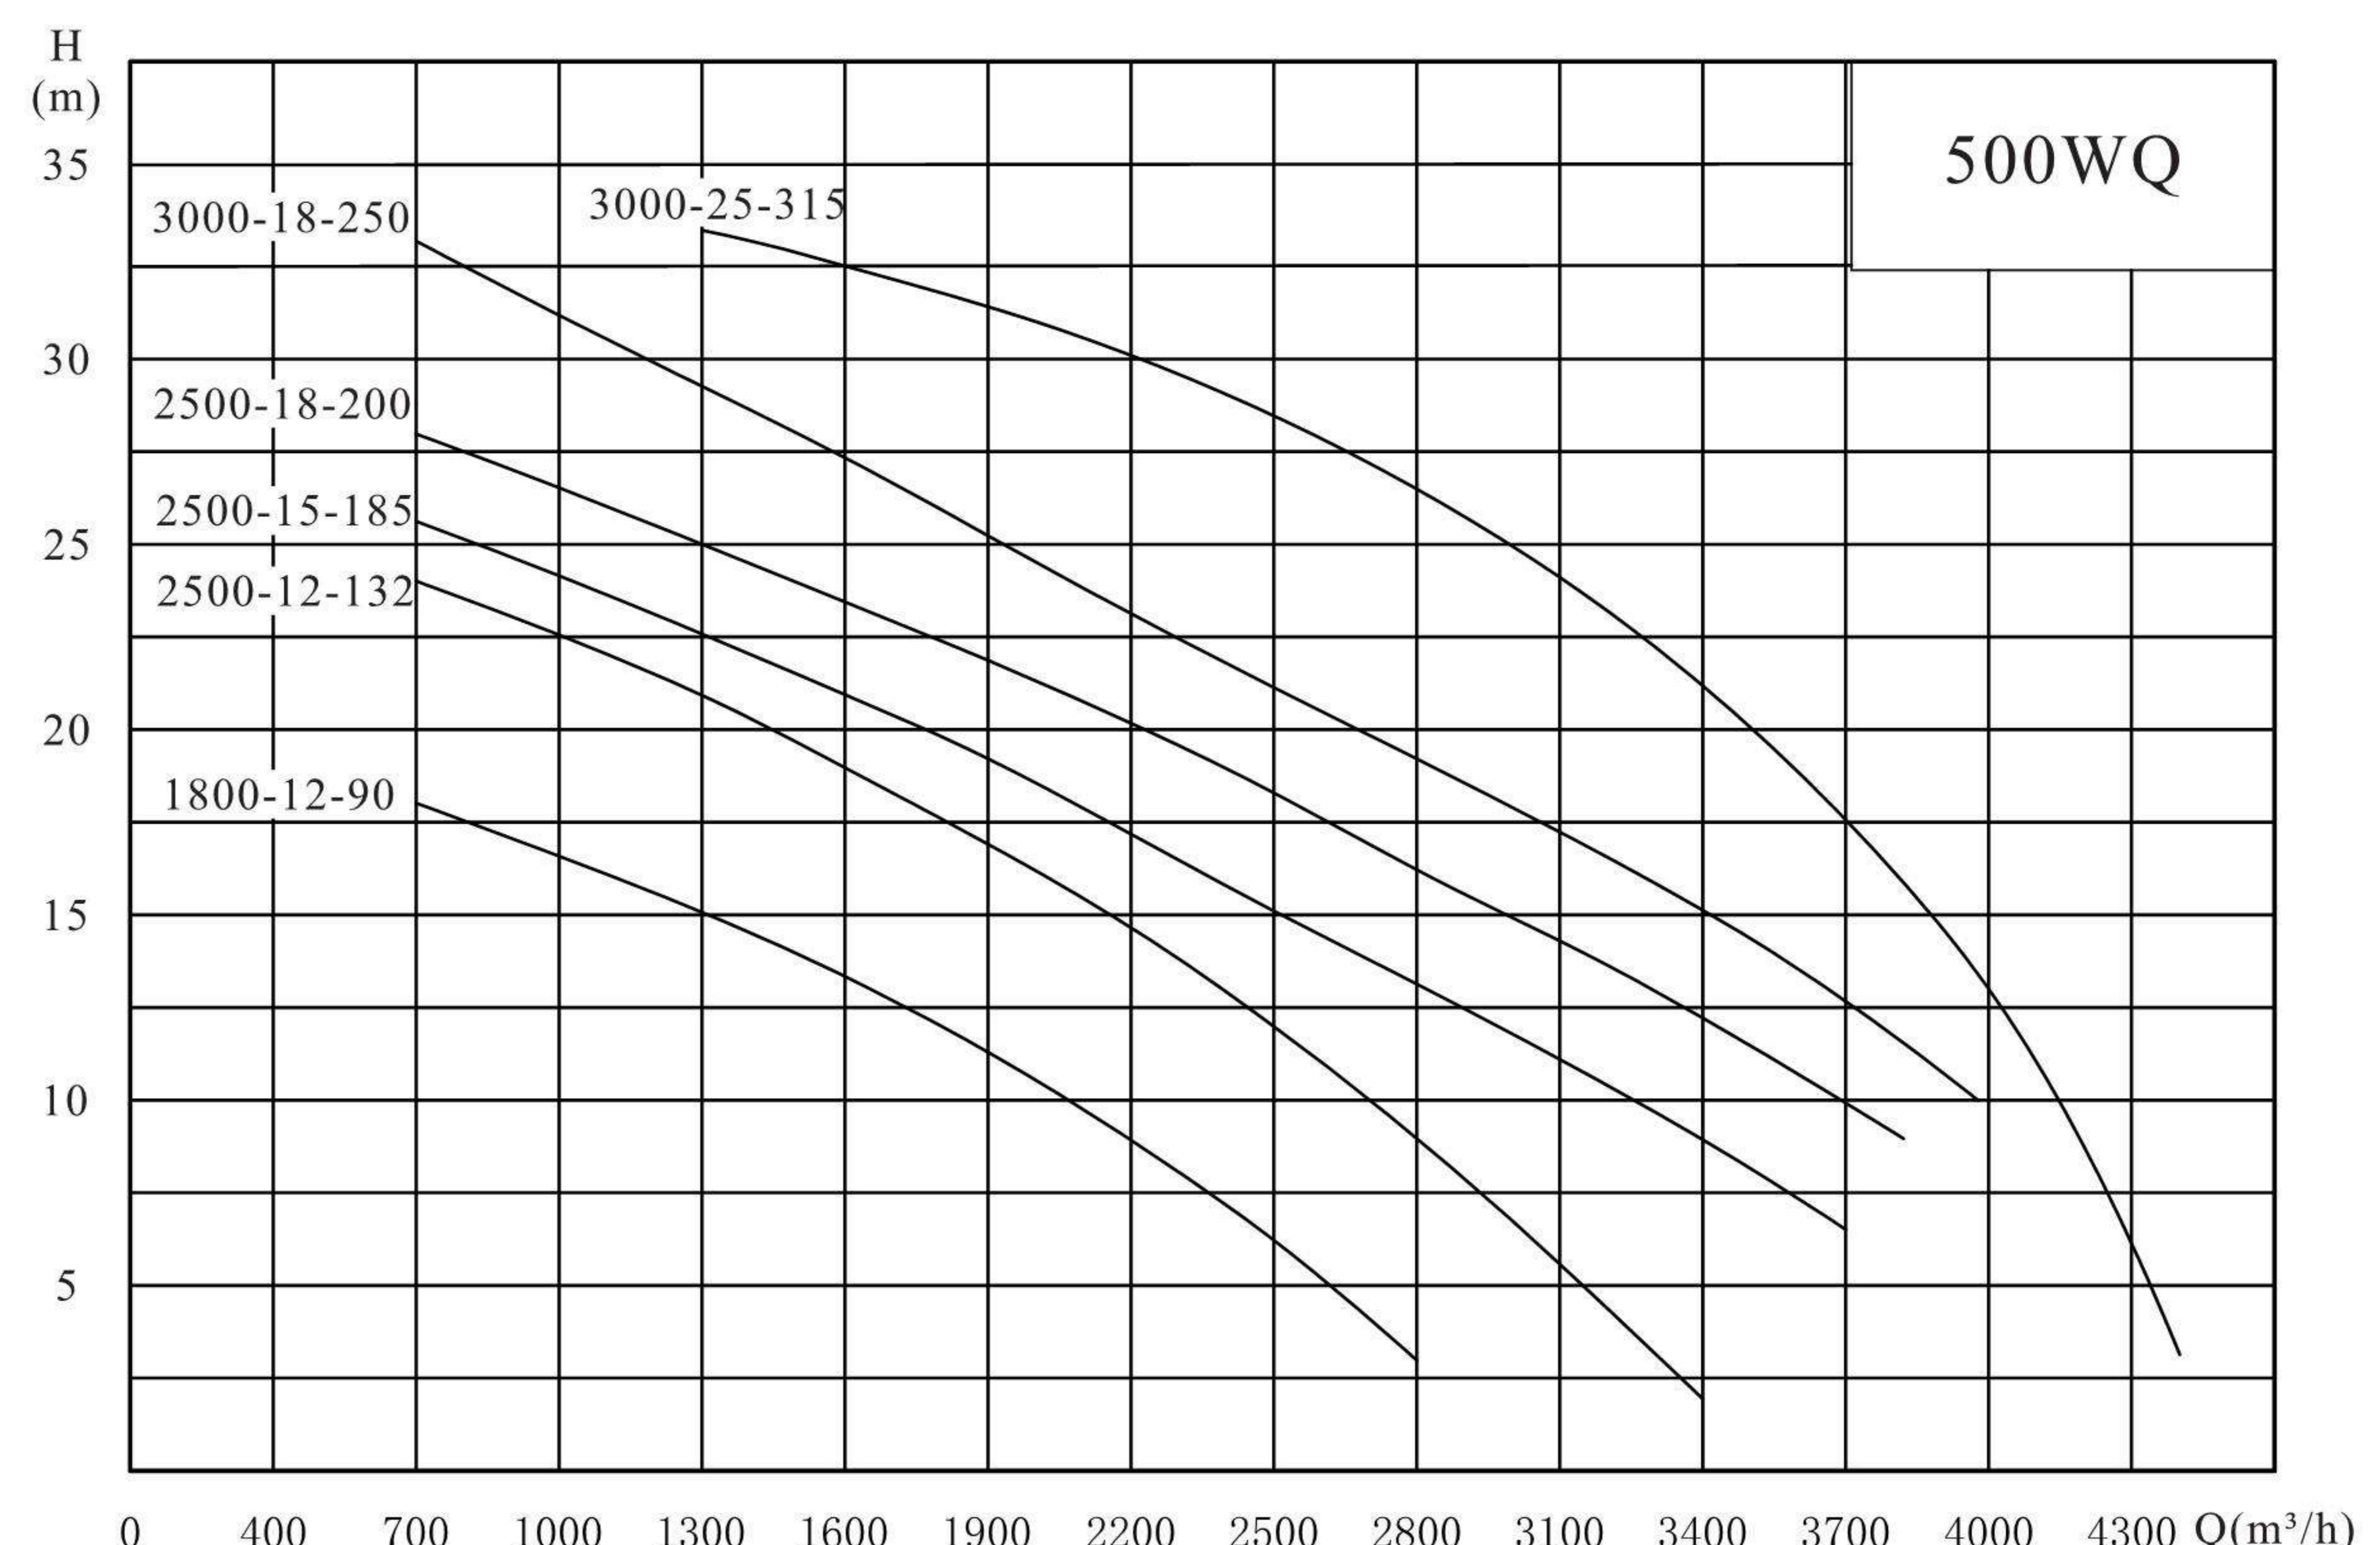

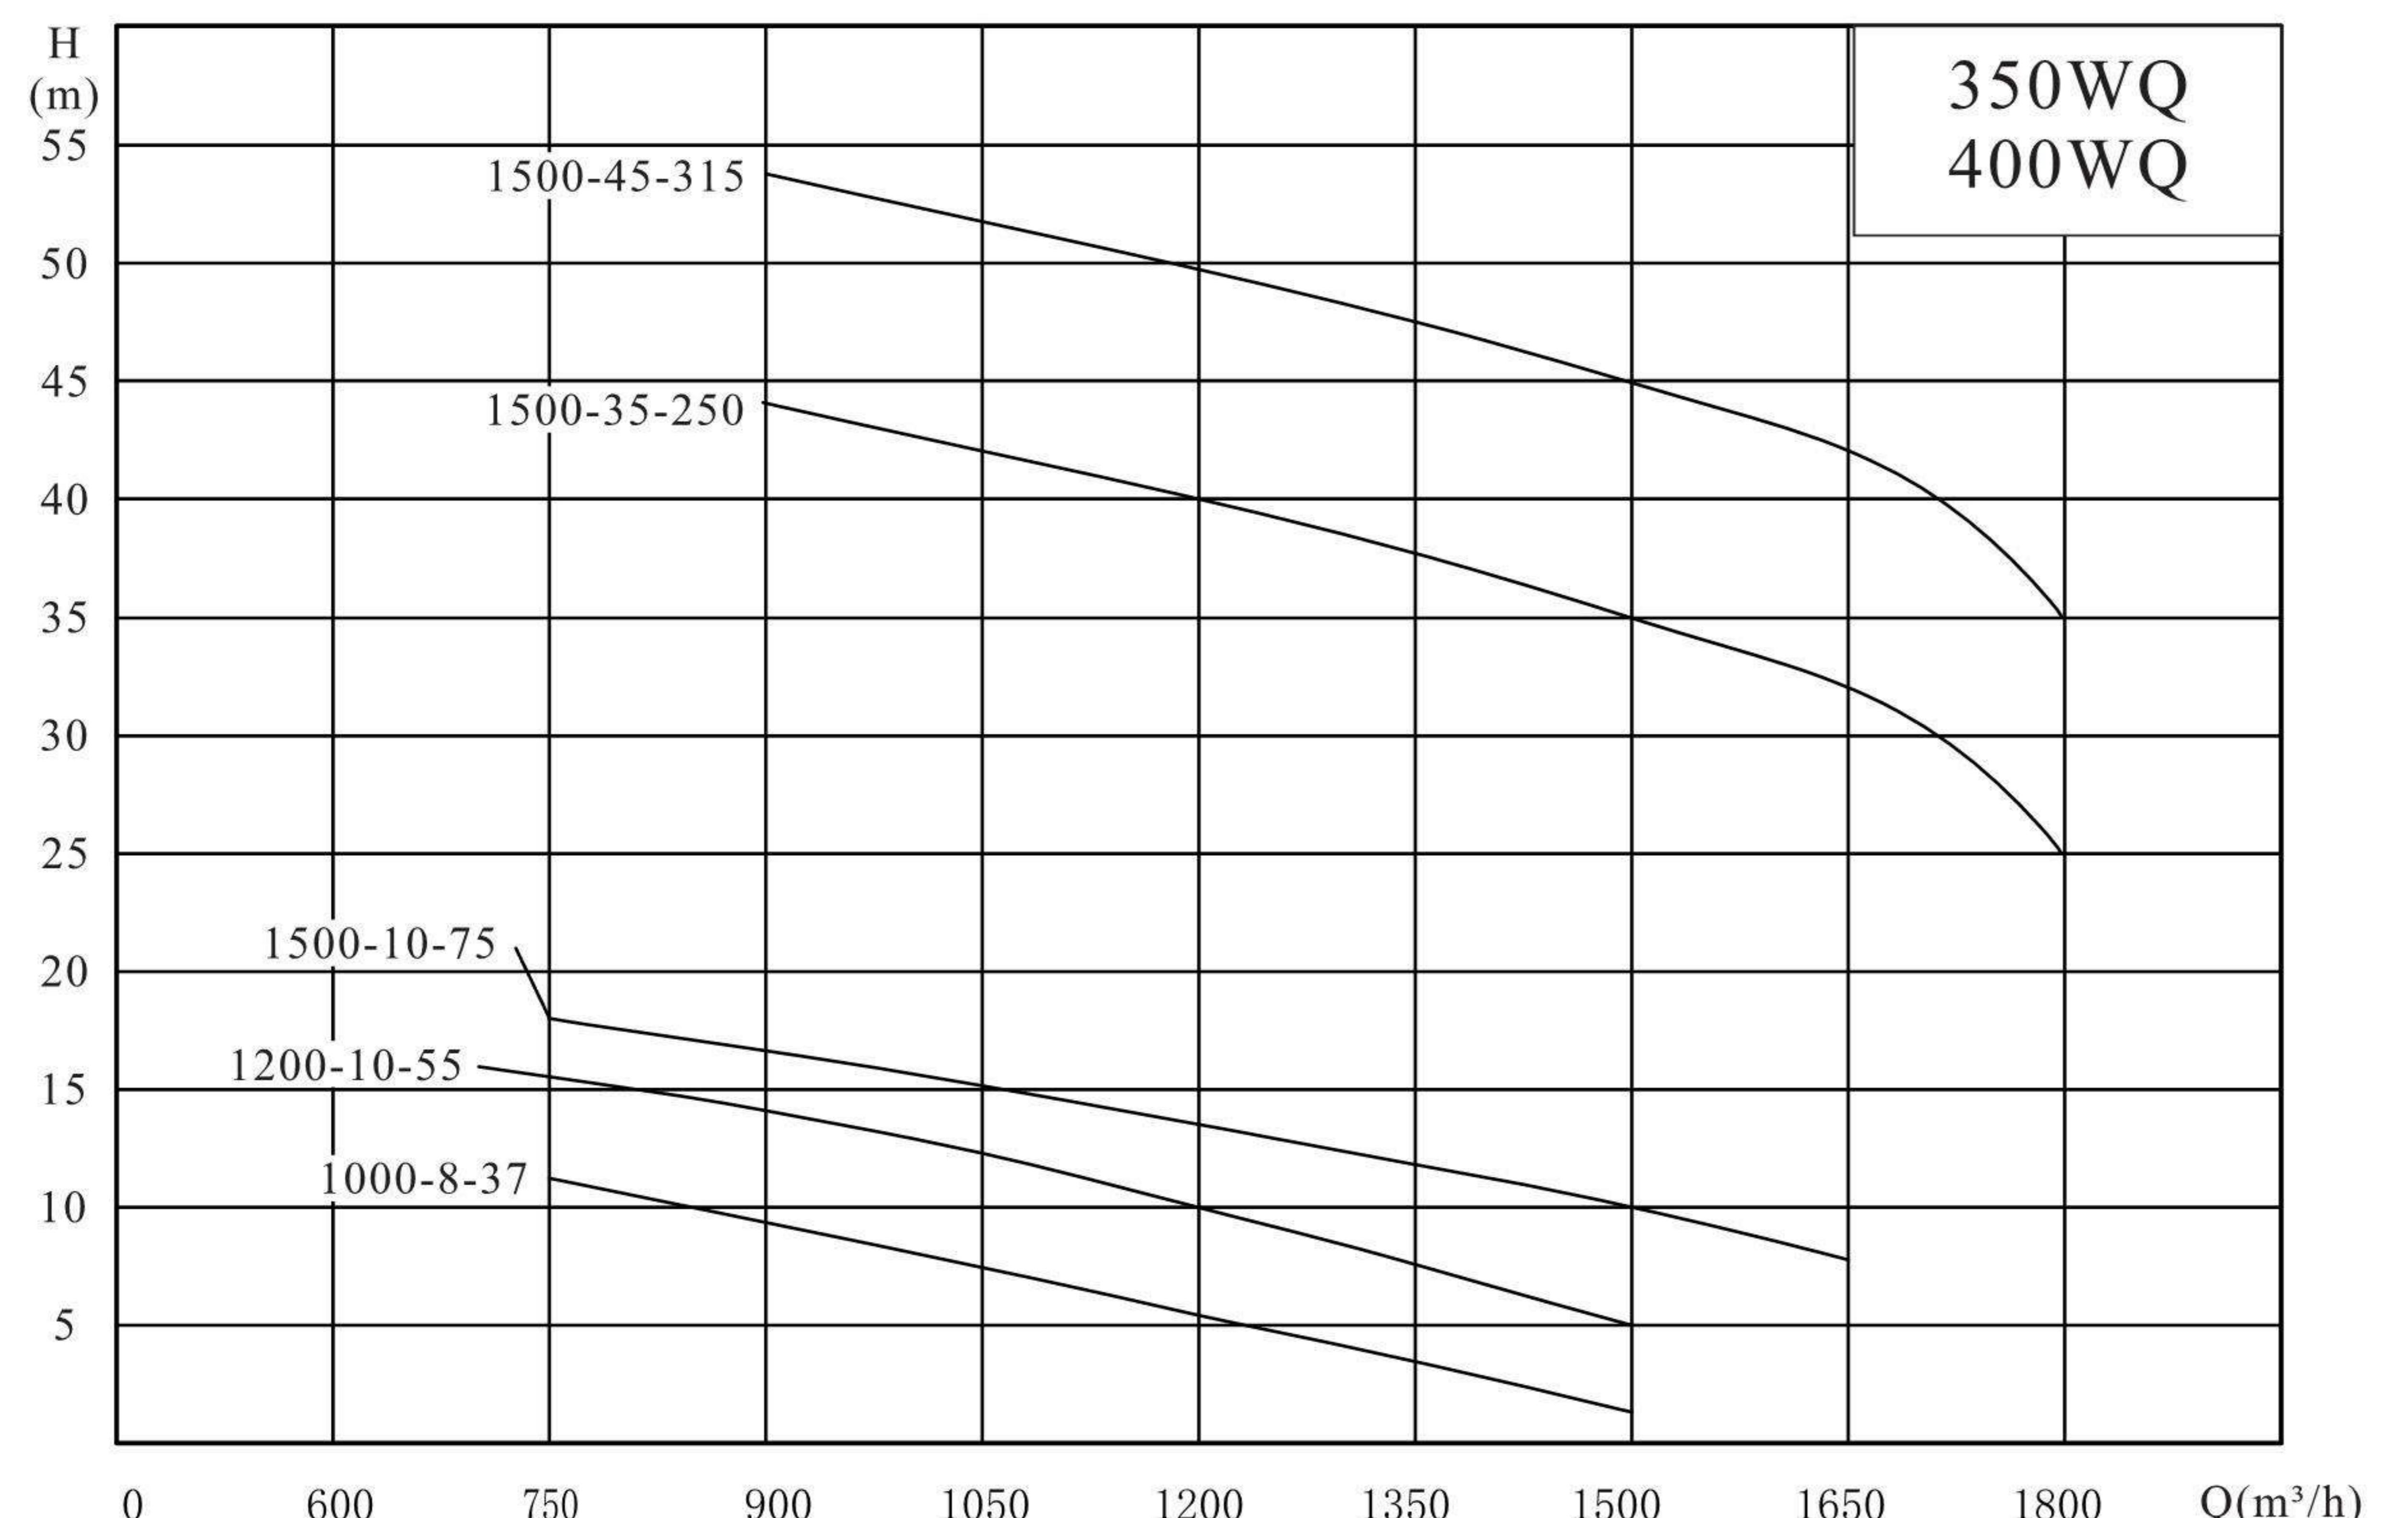

## 十八、Scope of supply, relevant dimensions

### 1、Scope of supply

Installation mode	Package of supplies	Optional parts			spare parts
Movable hose mounting	Main pump hose connector	hose		Electric control cabinet ★, terminal box gate (regulating) valve, check valve, chain cable (lifting pump) Drag grid (custom), hoist (custom), rectangular valve (custom) hose	impeller Sealing ring bearing M/S
Movable hard tube installation	Main pump flange plate	Double flanged elbow			
Automatic coupling installation	Main pump automatic coupling device	Guide bar Anchor bolt Expansion bolt			

★ The electric control cabinet must have an electric control cabinet of the control system that matches the water leakage and thermal protection components inside the main pump to ensure the reliable and safe operation of the main pump. The electric control cabinet of sewage pump is specially developed for WQ series sewage pump, which can effectively protect the safe operation of main pump and realize automatic control.

### 2、Cast iron automatic coupling installation related dimensions and movable installation hose size unit: mm(except inch)

Items	Pump dia	50	65	80	100	150	200	250	300	350	400	500
Guide tube dimensions Water pipe/seamless steel pipe		1"/32×3		1.5"/48×3			2"/60×3		2.5"/76×4			
Guide tube length mm			Pool depth-30	-300	-350	-400	-500	-600	-700		Pool depth-850	
Specification and quantity of expansion bolts			M12×80×2		M14×100×2			M20×120×2				
Specification and quantity of anchor bolts			M16×250×4		M20×300×4			M24×350×4				
Dimensions of the holes reserved for anchor bolts			80×80×300		100×100×350			120×120×400				
Inner diameter of the hose	50	65	75	100	150	200	250	300	350	400		500

## 十九、Notice for order

1、the order should indicate the product model, name, performance parameters (flow, head)

Installation method, material and optional parts, spare parts, etc.

The selection should take into account the influence of the medium weight on the power and the influence and requirements of the medium corrosion and corrosion resistance on the pump flow seals. Welcome to consult and contact our technicians.

2、Inside pump of the safety protection (oil and water probe, water probe, thermal sensor) and other special requirements, must be indicated when ordering. When ordering the electric control cabinet, the control mode (control pump number and level control, etc.) and automation requirements should be indicated

3、the normal cable length of the submersible sewage pump is 8m, if it needs to be increased, Please advise.

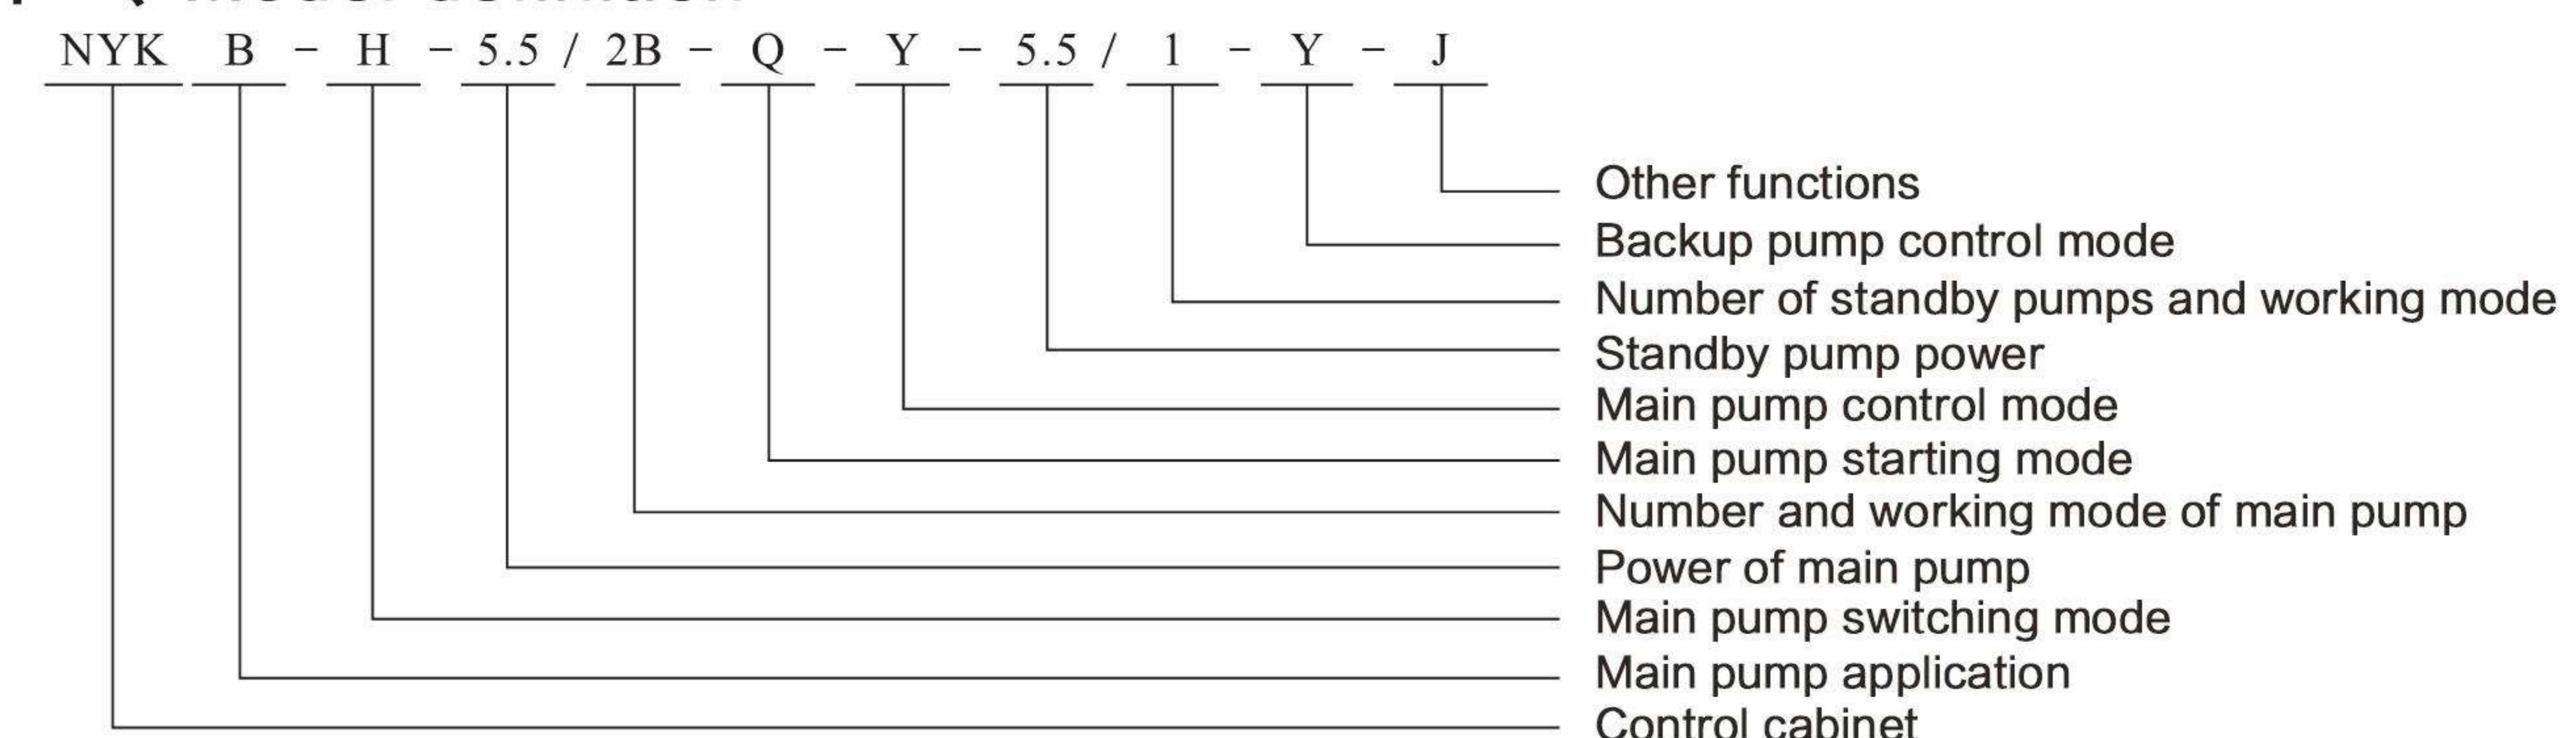

4、Due to the excellent design of the guide rod frame in the coupling device, the guide rod only needs to be a general water pipe or steel pipe. In the sample, we have provided the specifications and length calculation method of the water pipe or steel pipe used as the guide rod. Users only need to purchase the water pipe or steel pipe by themselves and cut it to the required length. Therefore, the guide rod is not included in the coupling device. Guide bars are optional.

5、complete sets of supplies are provided according to the installation method selected by the user, optional parts and spare parts should be extra ordered by the customer.

## 二十、Product overview

The pump control system is the special control part of the automatic water supply and drainage equipment of our company. In order to cooperate with the reliable operation of the pump, NYK and NYB automatic control cabinets can be divided into liquid level control, pressure (constant pressure) control, time control, temperature control, air conditioning joint control, fire protection and other types according to the different needs of users, and have the main circuit short circuit, phase loss, overload, overcurrent and other protection functions.

## 二十一、Model definition

## 二十二、Model description

Item	Code	Meaning
control panel	NYK	Relay type control cabinet
control panel	NYB	Variable frequency speed control cabinet
Applications	P	Water supply for industry and domestic
	B	For submersible sewage pumps
	X	Fire, spray pump
	C	Air conditioning, circulating water pump
Switching mode	H	Manual alternate switching
	AC	Automatic alternate switching
	AS	Timing automatic switching
Starting mode	Q	Direct starting
	Y	Star delta depressurization start
	Z	Autobuck starting
	R	Electronic soft start
Functions	B	Variable frequency starting
	J	Alarm function

## 二十三、Functions

### 1、Control type

(一) ordinary relay control: the AC contactor controls the start and stop of the pump motor, and the pump motor is in the power frequency full speed working state.

(二) NYB- Frequency conversion speed control: According to the instantaneous change of a certain parameter of the system (pressure, pressure difference, temperature, flow, etc.), the AC frequency conversion governor carries out stepless speed regulation on the pump motor to achieve the purpose of energy saving.

### 2、main and standby pump switching mode:

(一) H-manual switch: manually switch the main pump and standby pump. In case of failure of the primary pump, the standby pump will be automatically put into operation.

(二) AC- automatic alternating switching: suitable for the main pump, standby pump need to alternate work occasions, each start, the main and standby pump alternate once. When automatic alternation is not required, the switch can be changed to manual switching mode to select. This type can also have the function of backup pump failure (indicate when ordering);

(三) AS-timing automatic switching: suitable for the occasions when the main pump and the standby pump need to rotate regularly. When the main pump works to the set period, the timer automatically stops the main pump and starts the standby pump to balance the working time of the main and standby pumps. Choose the main pump and standby pump, manually switch. This function is the basic function of frequency conversion speed control.

### 3. Working mode of the pump

#### (一)、1 work+1 standby:

Control 1#, 2# two pumps, automatic can work in "1# with 2# standby" or "2# with 1# standby" two states, when the main pump fails, the standby pump will automatically put into work, "manual" start with the panel button operation control. If the user requires to increase the "dual-use" working mode (that is, two pumps can be used at the same time), you need to specify when ordering.

#### (二)、two use one standby:

Control 1#, 2#, 3# three pumps, can work in "1#, 2# with 3# standby" or "1#, 3# with 2# standby" or "2#, 3# with 1# standby" three states, when the main pump fails, the backup pump will automatically put into work. "Manual" start with the panel button operation control. If a main pump is turned off, it can be "one use and one standby". If the user requires to increase the "three-use" working mode [that is, three pumps can be used at the same time], please specify in detail when ordering.

#### (三)、3 workings+ 1 standby

Control of 1 #, 2 #, 3 #, 4 # 4 pumps, it can work in "1 #, 2 #, 3 # 4 # prepared" or "2 #, 3 #, 4 # 1 # prepared" or "1#, 3#, 4# with 2# standby" or "1#, 2#, 4# with 3# standby" four states, when the main pump fails, the backup pump will automatically put into work. "Manual" start with the panel button operation control. If a main pump is turned off, it becomes "dual use and standby"; If the two main pumps are turned off, it becomes "one use and one standby", if the user requires to increase the "four use" working mode (that is, four pumps can be used at the same time), you need to specify when ordering.

### 4. Starting mode:

(一)、R-direct starting: full voltage starting, full voltage operation, starting current is large;

(二)、Y-star triangle step-down starting: the motor stator winding is connected to the "Y" shape when starting, to reduce the voltage and current borne by each phase winding, and the motor stator winding is "△" shape when running;

(三)、Z-autotransformer step-down starting: when starting, reduce voltage and current by autotransformer step-down, and restore to full voltage during operation;

(四)、R-soft start: by the electronic soft starter buck start, starting process without contact switching, voltage and current rise smoothly, will not cause a big impact on the power grid and pipe network.

## 二十四、Control mode

1、Y-liquid level control: the pump to the liquid level as the control target, ordinary relay control according to the level of a water container (water tank, water tower, etc.) to control the start and stop of the pump; Frequency conversion speed control according to the level of a water container (water tank, water tower, etc.) to adjust the speed of the pump motor or control the start and stop of the pump;

2、P-pressure control: pump pressure as the control target, ordinary relay control according to the pressure of the pipe network to control the start and stop of the pump; Frequency conversion speed control according to the pressure of the pipe network to adjust the speed of the pump motor or control the start and stop of the pump to achieve the purpose of stabilizing the pipe network pressure;

3、E-special control mode: the pump takes other parameters as the control target, such as temperature, pressure difference, temperature difference, etc., the control process is the same as above.

## 二十五、Other functions

1、Yc-remote interface: The electric control cabinet is equipped with remote monitoring terminal, which can transmit the working condition of the pump to the distant duty room for monitoring;

2、control cabinet is equipped with dual power input interface; dual power supply can be automatically and manually switched;

3、I-man-machine interface: The electric control cabinet is equipped with a touch programmable terminal, which sets the working parameters of the system through an animated mimicry diagram and displays the operating reality of the equipment

4、S-special design: non-standard electric control cabinet, special design according to customer requirements
